The Forest Stewardship Council® (FSC) is an independent, not for profit, non-government organization established to support environmentally appropriate, socially beneficial, and economically viable management of the world’s forests.

FSC’s vision is that the world’s forests meet the social, ecological, and economic rights and needs of the present generation without compromising those of future generations.

1. Preface

1.1. Descriptive statement of the Forest Stewardship Council (FSC)

The Forest Stewardship Council A.C. (FSC) was established in 1993, as a follow-up to the United Nations Conference on Environment and Development (the Earth Summit at Rio de Janeiro, 1992) with the mission to promote environmentally appropriate, socially beneficial, and economically viable management of the world’s forests.

Environmentally appropriate forest management ensures that the production of timber, non-timber products and ecosystem services maintains the forest’s biodiversity, productivity, and ecological processes. Socially beneficial forest management helps both local people and society at large to enjoy long term benefits and also provides strong incentives to local people to sustain the forest resources and adhere to long-term management plans. Economically viable forest management means that forest operations are structured and managed so as to be sufficiently profitable, without generating financial profit at the expense of the forest resource, the ecosystem, or affected communities. The tension between the need to generate adequate financial returns and the principles of responsible forest operations can be reduced through efforts to market the full range of forest products and services for their best value (FSC A.C. By-Laws, ratified, September 1994; last revision in June 2011).

FSC is an international organization that provides a system for voluntary accreditation and independent third-party certification. This system allows certificate holders to market their products and services as the result of environmentally appropriate, socially beneficial and economically viable forest management. FSC also sets standards for the development and approval of FSC Stewardship Standards which are based on the FSC Principles and Criteria. In addition, FSC sets standards for the accreditation of Conformity Assessment Bodies (also known as Certification Bodies) that certify compliance with FSC’s standards. Based on these standards, FSC provides a system for certification for organizations seeking to market their products as FSC certified.
1.2. Descriptive statement of the Standard Development Group

FSC in Namibia is represented by the FSC Southern Africa Sub-regional office.

2. Preamble

2.1. Purpose of the standard

This standard sets out the required elements against which FSC accredited Certification Bodies shall evaluate forest management practices within the scope (see 2.2. below) of the standard. The FSC Principles and Criteria (P&C) for Forest Stewardship provides an internationally recognized standard for responsible forest management. However, any international standard for forest management needs to be adapted at the regional or national level in order to reflect the diverse legal, social and geographical conditions of forests in different parts of the world. The FSC P&C therefore require the addition of indicators that are adapted to regional or national conditions in order to be implemented at the Forest Management Unit (FMU) level.

With the approval of FSC-STD-60-004 V1-0 EN the FSC International Generic Indicators (IGI) by the FSC Board of Directors in March 2015, the adaptation of the P&C to regional or national conditions is done using the IGI standard as the starting point. This has the advantage to:

- Ensure the consistent implementation of the P&C across the globe;
- Improve and strengthen the credibility of the FSC System;
- Improve the consistency and quality of National Forest Stewardship Standards;
- Support a faster and more efficient approval process of National Forest Stewardship Standards.

The FSC Principles and Criteria together with a set of national indicators approved by FSC Policy and Standards Committee (PSC) constitute an FSC National Forest Stewardship Standard (NFSS).

The development of NFSS follows the requirements set out in the following FSC normative documents:

- FSC-PRO-60-006 V2-0 EN Development and Transfer of National Forest Stewardship Standards to the FSC Principles and Criteria Version 5-1;
- FSC-STD-60-002 (V1-0) EN Structure and Content of National Forest Stewardship Standards AND
- FSC-STD-60-006 (V1-2) EN Process requirements for the development and maintenance of National Forest Stewardship Standards.

The above documents have been developed by the FSC Policy and Standards Unit (PSU) to improve consistency and transparency in certification decisions between different Certification Bodies in the region/nation and indifferent parts of the world, and thereby to enhance the credibility of the FSC certification scheme as a whole.
2.2. Scope of standard
This standard is applicable to all forest operations seeking FSC certification within the standard applies to natural forest types in Namibia.

2.3. Background information on the standard development:
The development of this NFSS has been based on FSC-STD-60-004 V1-0 EN, the FSC International Generic Indicators (IGI) approved by FSC to facilitate national adaptation and ensure the consistent implementation of the P&C across the globe; to improve the quality of National Forest Stewardship Standards and strengthen the credibility of the FSC system.

The development of NFSS follows the requirements set out in the following FSC normative documents:
1. FSC-PRO-60-006 V2-0 EN Development and Transfer of National Forest Stewardship Standards to the FSC Principles and Criteria Version 5-1;
2. FSC-STD-60-002 (V1-0) EN Structure and Content of National Forest Stewardship Standards; and
3. FSC-STD-60-006 (V1-2) EN Process requirements for the development and maintenance of National Forest Stewardship Standards.

The above documents have been developed by the FSC Policy and Standards Unit (PSU) to improve consistency and transparency in certification decisions between different Certification Bodies in the region/nation and in different parts of the world, and thereby to enhance the credibility of the FSC certification structure as a whole.

In conformity with these requirements, a Proposal for the development of the NFSS for Namibia was approved by PSU in August 2017. Public consultation on Draft 1 was held in Namibia from 31 January – 31 March 2018.

4. Content

4.1. Context

Forestry in Namibia consists of indigenous tree species, of which savannah vegetation type(s) comprise of ~70%, dominated by Thornbush in north-central Namibia. There is no plantation forestry in Namibia, i.e. the commercialisation of exotic tree species. Selected seasonal river areas are infested with mostly alien, invasive shrubs and trees.

Categories of Forests in Namibia are classified according to land use practices, and the composition of resources. The Minister of Agriculture Water and Forestry (MAWF) has declared reserves on state land which has not been allocated as communal land. This includes the following:

Community Forests – Forests declared on communal land, with the agreement of the Chief or Traditional Authority. A body representing the people who traditionally use the community forest is appointed as the forest management authority;

State Forest Reserves - normally declared on state land which has not been allocated as communal land. However, on reasonable grounds, for effective management, any communal land can be declared as a state
forest for the purposes of managing forest resources of national importance or to preserve the ecosystems and other components of biological diversity; and

Regional Forest Reserves - are created at the request of the Regional Council, which negotiates with the Chief or Traditional Authority and others whose rights are affected.

Namibia is severely affected by bush thickening (encroachment). Bush encroachment is a natural phenomenon characterised by the excessive expansion of bush at the expense of other plant species, especially grasses. Bush encroachment is estimated to affect up to 45 million ha of Namibian land and has severe negative consequences on key ecosystem services, especially agricultural productivity, biodiversity and groundwater recharge. Agricultural productivity in Namibia has declined by two thirds throughout the past decades, mainly due to the negative impact of bush encroachment. The phenomenon affects both commercial and communal farming in Namibia, mostly the central, eastern and north-eastern regions. Various factors have been found to contribute to the process of bush encroachment. These include the reduction in the frequency of fires as well as overgrazing.

Increasingly, the encroacher bush is seen as a resource for downstream agro-processing related industries and energy supply. The commercialisation of the encroacher species is seen as a means to an end to restore degraded land to more natural conditions.

Charcoal is one of the main products produced from encroachment bush. It is mainly exported to South Africa and overseas markets (100,000 - 150,000 tonnes per annum) Namibia has a well-established charcoal sector, which comprises approximately 600 producers and employs a total of 5,000 - 6,000 workers. Currently, most producers are farmers, who venture into charcoal production as a means to combat bush encroachment on their own land. However, increasingly small enterprises also venture into charcoal making. As per national forestry regulations, charcoal can only be produced from encroaching species.

4.2 The Standard Development Group (SDG) consisted of representation from 3 chambers:
4.3. The SDG consulted in the following parties in preparation of Draft 1:
   i. Representatives of Charcoal producers, processors and Land owners
   ii. Willem Odendaal, Legal Assistance Centre
   iii. Wendy Viall, Nyae Nyae Development Foundation of Namibia
   iv. Pierre du Plessis, Senior Consultant member and former Director of the Centre for Research Information Action in Africa – Southern African Development and Consulting (CRIAA SA-DC), specialising in fair and equitable sharing of benefits of indigenous natural products commercialisation and management
   v. Dave Cole, consultant on the commercialisation of indigenous natural plant products in Namibia
   vi. Carol Murphy, consultant for Community Forests in Zambezi Region
   vii. Bruce Brewer, Cheetah Conservation Fund
   viii. Danie Van Vuuren, Namibian Agricultural Union
   ix. Stuart Valentine, Forestry Solutions
   x. Representatives of biomass-to-energy producers

5. References

The following referenced documents are relevant for the application of this standard. For references without a version number, the latest edition of the referenced document (including any amendments) applies.

FSC-POL-01-004 Policy for the Association of Organizations with FSC
FSC-POL-20-003 The Excision of Areas from the Scope of Certification
FSC-POL-30-001 FSC Pesticides Policy
FSC-POL-30-401 FSC Certification and the ILO Conventions
FSC-POL-30-602 FSC Interpretation on GMOs (Genetically Modified Organisms)
6. Note on the interpretation of indicators

For each Criterion a number of indicators are listed. Indicators apply to all scales of Organisations. Type of verification outlines the requirements from different scales of Organisations.

In many cases additional requirements are specified that are applicable only to large (i.e. forests which are not small or low intensity managed forests (‘SLIMFs’)). In these cases the indicator numbers are followed by the letter ‘L’.

The SDG developed a Risk Assessment based on the Corrective Action Request (CARs) history (10 year period) of Certificate Holders in Namibia. This was analysed per type of Certificate, i.e. Group Scheme certificates, Single site certificates (medium scale organisations) and SLIMF certificates. Risks were categorised into Low, Medium and High based on the number of CARs raised. This assisted the SDG with the process of adapting, dropping or creating new indicators to highlight issues of concern.

In addition, a health and safety risk assessment was carried out for various work tasks in the charcoal industry to explain the reduced need for personal protective clothing within the Namibian conditions. Refer to Annexure C.

### PRINCIPLE 1: COMPLIANCE WITH LAWS

**The Organization** shall comply with all applicable laws, regulations and nationally-ratified international treaties, conventions and agreements. (P1 P&C V4)

#### Criterion 1.1. **The Organization** shall be a legally defined entity with clear, documented and unchallenged legal registration, with written authorization from the legally competent authority for specific activities. (new)

Indicator 1.1.1 Legal registration* is granted by a legally competent* to carry out all activities within the scope of the certificate is documented and unchallenged

Verifiers:
- Forestry permit

Reference: Annex A - List of National and International Laws and Conventions

#### Criterion 1.2. **The Organization** shall demonstrate that the legal status of the Management Unit, including tenure and use rights, and its boundaries, are clearly defined. (C2.1 P&C V4)

Indicator 1.2.1. Legal* tenure* to manage and use resources within the scope of the certificate is documented and undisputed

Verifiers:
- Title Deed and/or Land tax Invoice - Land owners
- Lease agreement - Land managers
- Customary Tenure - Stakeholder interviews

Indicator 1.2.2. The boundaries of all Management Units* within the scope of the certificate are clearly marked or documented and clearly shown on maps for freehold land or physical demarcation or description for non-freehold land.

Verifiers:
- Map with clear boundaries (freehold land and conservancies)
- Physical markers (e.g. pegs, rocks) or description of the demarcations for non-freehold land
- Interviews with Stakeholders to verify no disputes

#### Criterion 1.3. **The Organization** shall have legal rights to operate in the Management Unit, which fit the legal status of The Organization and of the Management Unit, and shall comply with the associated legal obligations in applicable national and local laws and regulations and administrative requirements. The legal rights shall provide for harvest of products and/or supply of ecosystem services from within the Management Unit. The Organization shall pay the legally prescribed charges associated with such rights and obligations. (C1.1, 1.2, 1.3 P&C V4)

Indicator 1.3.1. All activities undertaken in the Management Unit* are carried out in compliance with:

1) Applicable laws* and regulations and administrative requirements,
2) Legal rights*
3) Relevant and required payments
### Verifiers:

**Proof of payments, invoices, certificates of issue such as but not limited to Social Security payment**

#### Social security

**Criterion 1.4.** The Organization shall develop and implement measures, and/or shall engage with regulatory agencies, to systematically protect the Management Unit from unauthorized or illegal resource use, settlement and other illegal activities. (C1.5 P&C V4)

**Indicator 1.4.1.** Measures are implemented to provide protection* from unauthorized or illegal hunting, fishing, trapping, collecting, settlement and other unauthorized activities.

**Verifiers:** At least one of the following:

- Proof of training to harvesters*
- Harvesters Agreement or Farm Rules signed by harvesters
- Field observations
- Proof of progressive disciplinary action, where applicable
- Tribal Authority records or interviews

**Indicator 1.4.2.** Measures are implemented to provide protection* from unauthorized or illegal harvesting.

**Verifiers:**

- Proof of training to harvesters*
- Harvesters Agreement or Farm Rules signed by harvesters
- Field observations
- Proof of progressive disciplinary action, where applicable
- Tribal Authority records or interviews, where applicable

**Indicator 1.4.3.** A system is implemented to work with the regulatory bodies to identify, report, control and discourage unauthorized or illegal activities, where necessary.

**Verifiers:**

- Stakeholder Consultation, where applicable

**Guidance:**

- MET officials ; Reports or Interviews with MAWF ,NAMPOL and TA ; Cooperation with CRIME PREVENTION FORUM, Neighbourhood Watch (all NAMPOL recognised bodies)

**Indicator 1.4.4.** If illegal or unauthorized activities are detected, measures are implemented to address them.

**Verifiers:**

- Disciplinary and/or legal action – Type of records maintained according to scale and intensity of the Organisation

**Criterion 1.5.** The Organization shall comply with the applicable national laws, local laws, ratified international conventions and obligatory codes of practice, relating to the transportation and trade of forest products within and from the Management Unit, and/or up to the point of first sale. (C1.3 P&C V4)

**Indicator 1.5.1.** Compliance with applicable national laws* relating to the transportation and trade of forest products up to the point of first sale is demonstrated.
Verifiers:
Forestry Harvesting Permit; Forestry Marketing permit; Forestry Transport Permit; Specified Delivery Note; Goods Received Note; Weight List; Tax Invoice ; Supplier Invoice

**Indicator 1.5.2 Compliance with CITES provisions for applicable species**

Verifiers:
Producers have access to details of CITES species and Relevant MET permit

**Criterion 1.6. The Organization** shall identify, prevent and resolve disputes over issues of statutory or customary law, which can be settled out of court in a timely manner, through engagement with affected stakeholders. (C2.3 P&C V4)

**Indicator 1.6.1.** An effective, publically available dispute resolution process is in place

Verifiers:
Group Scheme and Large Scale Organisations: There is a documented dispute resolution mechanism (procedures and/or policy)
SLIMF and Small Scale Organisations: There is a common understanding between management and stakeholders regarding what to do in case of a dispute

**Indicator 1.6.2 Disputes related to issues of applicable laws or customary law that can be settled out of court are responded to in a timely manner, and are either resolved or are in the dispute resolution process of the Organisation or the Courts.**

Verifiers:
Group Scheme and Large Scale Organisations: There is a documented dispute resolution mechanism (procedures and/or policy)
SLIMF and Small Scale Organisations: There is a common understanding between management and stakeholders regarding what to do in case of a dispute

**Indicator 1.6.3 Up to date records of disputes related to issues of applicable laws or customary law, are held including:**

1) Steps taken to resolve disputes;
2) Outcomes of all dispute resolution processes; and
3) Unresolved disputes, the reasons they are not resolved, and how they will be resolved.

Verifiers:
Register of disputes including the above

**Criterion 1.7. The Organization** shall publicize a commitment not to offer or receive bribes in money or any other form of corruption, and shall comply with anti-corruption legislation where this exists. In the absence of anti-corruption legislation, The Organization shall implement other anti-corruption measures proportionate to the scale and intensity of management activities and the risk of corruption. (new)

**Indicator 1.7.1 A policy which meets or exceeds related legislation is implemented that includes a commitment not to offer or receive bribes of any description. The policy is publicly available at no cost.**

Verifiers:
Anti-corruption Policy and/or Statement
**Guidance:**

Namibia Anti-Corruption Act (2003)

Guidance:
Risk and hazardous substance assessment for relevant employees

**Criterion 2.2.** The Organization shall promote gender equality in employment practices, training opportunities, awarding of contracts, processes of engagement and management activities. (new)

**Indicator 2.2.1** Systems are implemented that promote gender equality* and prevent gender discrimination in employment practices, training opportunities, awarding of contracts, processes of engagement* and management activities.

Verifiers:
Discussions with workers and managers.
- internal rules, rules on salary;
- job descriptions;
- training records;
- vacancy announcements

Large Scale Organisations and Group Schemes: Policy
Small Scale Organisations and SLIMF: Verbal understanding
Guidance:
Namibian Labour Act

Indicator 2.2.2 Job and training opportunities are open to both women and men under the same conditions, and women are encouraged to participate actively in all levels of employment, which include meetings, where not detrimental to health and safety.

Verifiers:
Discussions with workers and managers
Field inspection by auditor

Indicators 2.2.3 Women and men are paid equitable wages and individually when they do the same work.
Verifiers:
Pay sheets signed by women
Discussion with workers and manager

Indicator 2.2.4 Maternity leave is 4 weeks before childbirth and 8 weeks after childbirth. Three days paternity leave is available and there is no penalty for taking it.
Verifiers:
Employment contract
Leave documents, where applicable.
Interviews with workers and management

Guidance:
Paternity leave is not required in the Namibian Labour Act, Act No. 11 of 2007. May be booked as Leave, where applicable.

Indicator 2.2.5 Confidential and effective mechanisms exist for reporting and eliminating cases of sexual harassment and discrimination based on gender, marital status, parenthood or sexual orientation.
Verifiers:
Contracts with workers*
Discussions with manager and workers.
Grievance register

Guidance:
Namibian Labour Act

Criterion 2.3. The Organization shall implement health and safety practices to protect workers from occupational safety and health hazards. These practices shall, proportionate to scale, intensity and risk of management activities, meet or exceed the recommendations of the ILO Code of Practice on Safety and Health in Forestry Work. (C4.2 P&C V4)
Note – The SDG evaluated the conditions in Namibia along with the risk posed to workers from the heat and other environmental conditions. The height of encroacher bush in Namibia is approximately 4.5 meters in height, when grown. The Namibian Climate is dry with high temperatures ranging between 25 degrees Celsius in Winter and 48 degrees Celsius in Summer. Based on the assessment, the SDG has developed Annex C which outlines the required personal protective equipment (PPE)

<table>

**Indicator 2.3.6** The health and safety practices are reviewed and revised as required after major incidents or accidents.  
**Verifiers:**  
Large Scale Organisations and Group Schemes: Assessment reports, health and safety meetings minutes, instructions to personal and training notes  
SLIMF and Small Scale Organisations: Verbal description by workers  

**Guidance:**  
Major incidents - all reportable incidents subject to Employees' Compensation

**Indicator 2.3.7** Accommodation provided to workers meet or exceed the ILO Code of Practice on Safety and Health in Forestry Work  
**Verifiers:**  
Inspection of Housing (Refer to Annex D)  

**Criterion 2.4.** The Organization shall pay wages that meet or exceed minimum forest industry standards or other recognized forest industry wage agreements or living wages, where these are higher than the legal minimum wages. When none of these exist, The Organization shall through engagement with workers develop mechanisms for determining living wages. (new)

**Indicator 2.4.1** Wages are as paid as per Namibian Minimum Wage Rates  
**Verifiers:**  
Pay sheets/slip of employees/contractors  

**Guidance:**  
As per the Namibian Labour Act, Act No. 11 of 2007 – To prevent Debt Bondage, No more than one third of shop or food credit of the worker’s average charcoal earnings should be allowed.  
Only in case of compassionate reasons like death/funerals can a bigger advance be given.  
NCA agreement with the Farm Workers Union and the Namibian Ministry of Labour – for signatories to this agreement and the members of the farm workers union. Contact the NCA for further information.  
Namibian Labour Act, Act No. 11 of 2007

**Indicator 2.4.2** Wages, salaries and contracts are paid on time.  
**Verifiers:**  
Discussions with workers.  

**Guidance:**  
Evidence that payment to workers has not been delayed until second load of charcoal is delivered; (Unfortunately this is common practice to avoid workers from leaving for other employment).
**Criterion 2.5.** The Organization shall demonstrate that workers have job-specific training and supervision to safely and effectively implement the Management Plan and all management activities. (C7.3 P&C V4)

<table>

1) Steps taken to resolve grievances;
2) Outcomes of all dispute* resolution processes including fair compensation*; and
3) Unresolved disputes*, the reasons they are not resolved, and how they will be resolved.

Verifiers:
Grievance records maintained for 5 years
Discussions with workers and managers.

Indicator 2.6.4 Fair compensation* is provided to workers* for work-related loss or damage of property and occupational disease* or injuries.

Verifiers:
All workers registered for employees’ compensation, Payment of Social Security contributions, other work related compensations, where applicable and liable

**Note**

Annex B: Training
Annex C: Personal Protective Equipment
Annex D: Housing

**PRINCIPLE 3: INDIGENOUS PEOPLES’ RIGHTS**

The Organization shall identify and uphold Indigenous Peoples’ legal and customary rights of ownership, use and management of land, territories and resources affected by management activities. (P3 P&C V4)

Note - This Principle is likely to be most relevant when the Organisation is operating in or neighbouring communal areas or resettlement farms where Indigenous People may be living or have rights of access to the area and its resources.

The Constitution of Namibia emphasises equality and freedom from discrimination on the grounds of sex, ethnic origin or social or economic status etc.. It does not make specific reference to marginalised or indigenous groups but Article 23 allows Parliament to enact legislation to provide affirmative actions to redress social, economic and educational imbalances. Although Namibia has no legislation dealing directly with indigenous peoples, it has a number of interconnected Acts of Parliament which provide for implementing certain rights of indigenous peoples, particularly in the areas of land, leadership, natural resource management and education.

Principle 3 and its Criteria ensure that Indigenous People are identified and their legal and customary rights are safeguarded under the laws of Namibia. If the Management Unit cannot identify any Indigenous People who claim any rights in its management area or wider area, Criteria and Indicators from 3.1.2 onwards become non-applicable.

**Criterion 3.1.** The Organization shall identify the Indigenous Peoples that exist within the Management Unit or those that are affected by management activities. The Organization shall then, through engagement with these Indigenous Peoples, identify their rights of **tenure**, their rights of access to and use of **forest** resources and **ecosystem services**, their **customary rights** and legal rights and obligations that apply within the Management Unit. The Organization shall also identify areas where these rights are contested. (new)
| Indicator 3.1.1 Indigenous Peoples* that may be affected by management activities are identified. |
| Verifiers: |
| Large Scale Organisations and Group Schemes: Map and list reflecting the location and contact details of resident communities, neighbours and nearby settlements. |
| SLIMF and Small Scale Organisations: Verbal description of who their neighbours are. |
| Interviews with responsible staff to assess knowledge of residents and neighbouring communities. |

| Indicator 3.1.2. The Organization* has identified and is aware of the rights of indigenous people, including those related to ownership, the access to and use of forest resources |
| Verifiers: |
| Large Scale organisations and Group Schemes: supporting documentation for access rights and ownership and/or map |
| SLIMF and Small Scale Organisations: verbal/ documented, where required |

| Criterion 3.2. The Organization shall recognize and uphold the legal and customary rights of Indigenous Peoples to maintain control over management activities within or related to the Management Unit to the extent necessary to protect their rights, resources and lands and territories. Delegation by Indigenous Peoples of control over management activities to third parties requires Free, Prior and Informed Consent. (C3.1 and 3.2 P&C V4) |

| Indicator 3.2.1 Indigenous Peoples are informed of how they may engage with the Organisation to the extent necessary to protect their rights, where applicable. |
| Verifiers: |
| SLIMF and Small Scale Organisations: Interviews with Indigenous People |
| Group Schemes and Large Scale Organisations: Documented Stakeholder consultation |

| Indicator 3.2.2 The legal* and customary rights* of Indigenous Peoples to maintain control over management activities are not violated by The Organization*. |
| Verifiers: |
| Records of disputes |
| Stakeholder Interviews |

**GUIDANCE**

Traditional Authorities Act and Communal Land Reform Act No. 5, 2002, its amendments and regulations

| Indicator 3.2.3 Where evidence exists that legal* and customary rights* of Indigenous Peoples related to management activities have been violated, the dispute* resolution process shall be followed. |
| Verifiers: |
| Records of disputes. |
| Large Scale Organisations and Group Schemes: Causes and nature of disputes and actions taken are monitored. |

| Indicator 3.2.4 Free, prior and informed consent* is granted by Indigenous Peoples* prior to management activities that affect their identified rights through a process that includes: |
| 1) Ensuring Indigenous Peoples* know their rights and obligations regarding the resource; |
2) Informing the Indigenous Peoples* of the value, in economic, social and environmental terms, of the resource over which they are considering delegation of control;

3) Informing the Indigenous Peoples* of their right to withhold or modify consent to the proposed management activities to the extent necessary to protect their rights, resources, lands and territories*; and

4) Informing the Indigenous Peoples* of the current and future planned forest* management activities.

Verifiers:
Records of Consultation
Group Schemes and Large Scale Organisations: Documented Procedures

| Criterion 3.3. | The Organization and the Indigenous Peoples shall be concluded through Free, Prior and Informed Consent. The agreement shall define its duration, provisions for renegotiation, renewal, termination, economic conditions and other terms and conditions. The agreement shall make provision for monitoring by Indigenous Peoples of The Organization’s compliance with its terms and conditions. (new) |
| Indicator 3.3.1 | Where control over management activities has been granted through Free Prior and Informed Consent* based on culturally appropriate* engagement*, the binding agreement* contains the duration, provisions for renegotiation, renewal, termination, economic conditions and other terms and conditions. The Agreement contains the provision for monitoring* by Indigenous Peoples* of The Organization*’s compliance with its terms and conditions. Records of the Agreements are maintained. |

Verifiers:
Contractual Agreement with Indigenous Peoples

| Indicator 3.4.1 | The rights, customs and culture of Indigenous Peoples* as defined in UNDRIP and ILO Convention 169 are not violated by The Organization*. |

Verifiers:
Stakeholder Interviews

| Indicator 3.4.2 | Where evidence that rights, customs and culture of Indigenous Peoples* have been violated by The Organization*, the situation is documented including steps to restore* these rights, customs and culture of Indigenous Peoples* |

Verifiers:
Dispute Resolution Procedure, where relevant and Records of process followed

| Criterion 3.5. | The Organization, through engagement with Indigenous Peoples, shall identify sites which are of special cultural, ecological, economic, religious or spiritual significance and for which these Indigenous Peoples hold legal or customary rights. These sites shall be recognized by The Organization and their management, and/or protection shall be agreed through engagement with these Indigenous Peoples. (C3.3P&C V4) |
| Indicator 3.5.1 | Sites of significance to Indigenous Peoples regarding their legal* or customary rights*, shall be clearly
identified.
Verifiers
Records of community and stakeholder consultations
Maps, where allowed by Indigenous Peoples.

GUIDANCE
The following types of sites of special significance are commonly found in Namibia:
grave sites, sacred and historical sites, areas of significant scenic value, rock art and historical routes.

Indicator 3.5.2 Measures to protect such sites are agreed, documented and implemented with Indigenous Peoples’ agreement, where applicable
Verifiers:
Group Schemes and Large Scale Organisations: Documented procedures
SLIMF and Small Scale Organisations: Interviews with management and stakeholders

3.5.3 Newly discovered sites of significance are investigated by management, consulted with relevant stakeholders and are not impacted by operations until consultation and measures are agreed upon.
Verifiers:
Interviews with workers and relevant stakeholders

Criterion 3.6. The Organization shall uphold the right of Indigenous Peoples to protect and utilize their traditional knowledge and shall compensate local communities for the utilization of such knowledge and their intellectual property. A binding agreement as per Criterion 3.3 shall be concluded between The Organization and the Indigenous Peoples for such utilization through Free, Prior and Informed Consent before utilization takes place, and shall be consistent with the protection of intellectual property rights. (C3.4 P&C V4)

Indicator 3.6.1 Traditional knowledge* and intellectual property* are protected and compensated for. It is only used when the acknowledged owners of that traditional knowledge* and intellectual property* have provided their Free, Prior and Informed Consent* formalized through a binding agreement*.
Verifiers:
Agreement with Indigenous Peoples
Records of Payments

PRINCIPLE 4: COMMUNITY RELATIONS

The Organization shall contribute to maintaining or enhancing the social and economic wellbeing of local communities. (P4 P&C V4)

Criterion 4.1. The Organization shall identify the local communities that exist within the Management Unit and those that are affected by management activities. The Organization shall then, through engagement with these local communities, identify their rights of tenure, their rights of access to and use of forest resources and ecosystem services, their customary rights and legal rights and obligations that apply within the Management Unit. (new)
<table>

| Indicator 4.1.2 | The Organization* has identified and is aware of the legal and customary rights of local communities* and affected stakeholders* including those related to ownership, the access to and use of forest resources |
| **Verifiers:**  | Group Scheme and Large Scale Organisations: Documented Agreements and/or Maps |
|                | SLIMF and Small Scale Organisations: Documented Agreements, where relevant and verbal description |

| **Criterion 4.2.** | The Organization shall recognize and **uphold** the legal and customary rights of local communities to maintain control over management activities within or related to the Management Unit to the extent necessary to protect their rights, resources, lands and territories. Delegation by local communities of control over management activities to third parties requires Free, Prior and Informed Consent. *(C2.2 P&C V4)* |

| Indicator 4.2.1 | Local communities* are informed of how they may engage with the Organisation to the extent necessary to protect their rights, where applicable |
| **Verifiers:**  | Group Schemes and Large Scale Organisations: Records of stakeholder consultation |
|                | SLIMF and Small Scale Organisations: Interviews with stakeholders |

| Indicator 4.2.2 | The legal* and customary rights* of local communities* to maintain control over management activities are not violated by The Organization*. |
| **Verifiers:**  | Stakeholder interviews |
|                | Records of disputes (and their amicable resolution) |

| Indicator 4.2.3 | Where evidence exists that legal* and customary rights* of local communities* related to management activities have been violated, the dispute* resolution process shall be followed. |
| **Verifiers:**  | Evidence that the Dispute Resolution Process has been followed and/or Interviews with stakeholders |

| Indicator 4.2.4 | Free, prior and informed consent* is granted by local communities* prior to management activities that affect their identified rights through a process that includes: |
|                | 1) Ensuring local communities* know their rights and obligations regarding the resource; |
|                | 2) Informing the local communities* of the value, in economic, social and environmental terms, of the resource over which they are considering delegation of control; |
|                | 3) Informing the local communities* of their right to withhold or modify consent to the proposed management activities |
4) Informing the local communities* of the current and future planned forest* management activities.

Verifiers:
Evidence of consultation

Group Scheme and Large Scale Organisations: Documented procedures

**Criterion 4.3.** The Organization shall provide reasonable opportunities for employment, training and other services to local communities, contractors and suppliers proportionate to scale and intensity of its management activities. (C4.1 P&C V4)

Indicator 4.3.1 Reasonable* opportunities are provided to local communities*, local contractors and local suppliers for:
1) Employment,
2) Training, and
3) Other services.

Verifiers:
Group Scheme and Large Scale Organisations: Recruitment and employment policies of the organisation

All organisations: Interviews with the workers and or contractors

**Criterion 4.4.** The Organization shall implement additional activities, through engagement with local communities that contribute to their social and economic development, proportionate to the scale, intensity and socio-economic impact of its management activities. (C4.4 P&C V4)

Indicator 4.4.1 Opportunities for local social and economic development are identified with local communities* and other relevant organizations.

Verifiers:
Group Scheme and Large Scale Organisations: Opportunities identified on regional scale

Indicator 4.4.2 Projects and additional activities are implemented and / or supported that contribute to local social and economic benefit and are proportionate to the socio-economic impact of management activities.

Verifiers:
Stakeholder Interviews
Documented Evidence and/or Photographic Evidence

Guidance
Evidence of genuine engagement and contributions which have longer term benefit

**Criterion 4.5.** The Organization, through engagement with local communities, shall take action to identify, avoid and mitigate significant negative social, environmental and economic impacts of its management activities on affected communities. The action taken shall be proportionate to the scale, intensity and risk of those activities and negative impacts. (C4.4 P&C V4)

Indicator 4.5.1 Through culturally appropriate* engagement* with local communities*, measures are implemented to
**Criterion 4.6.** The Organization, through engagement with local communities, shall have mechanisms for resolving grievances and providing fair compensation to local communities and individuals with regard to the impacts of management activities of The Organization. (C4.5 P&C4)

**Indicator 4.6.1** A publicly available* dispute* resolution process is in place.

**Guidance:**
Cross reference to Indicator 1.6.1

**Indicator 4.6.2** Grievances related to the impacts of management activities are responded to in a timely manner*, and are either resolved or are in the dispute* resolution process.

**Guidance:**
Cross reference to Indicator 1.6.2

**Indicator 4.6.3** An up to date record of grievances related to the impacts of management activities is held including:
1) Steps taken to resolve grievances
2) Outcomes of all dispute* resolution processes including fair compensation* to local communities and individuals; and
3) Unresolved disputes*, the reasons they are not resolved, and how they will be resolved.

**Verifier:**
Register of Grievances and status of dispute resolution

**Indicator 4.6.4** Operations continue in areas until a legal verdict is communicated, where disputes* exist of:
1) Substantial magnitude*;
2) Substantial duration*; or
3) Involving a significant* number of interests.

**Verifiers:**
Record of disputes.
Evidence of consultation with affected parties and with Legal representation

**Guidance:**
Suspension of operations would take place in the case of very serious disputes.
**Criterion 4.7.** The Organization, through engagement with local communities, shall identify sites which are of special cultural, ecological, economic, religious or spiritual significance, and for which these local communities hold legal or customary rights. These sites shall be recognized by The Organization, and their management and/or protection shall be agreed through engagement with these local communities. (new)

**Indicator 4.7.1** Sites of significance to local communities and key stakeholders regarding their legal* or customary rights*, shall be clearly identified.

Verifiers:
- Records of community and stakeholder consultations
- Maps, where allowed by the stakeholders

Guidance:
- The following types of sites of special significance are commonly found in Namibia: grave sites, sacred and historical sites, areas of significant scenic value, rock art and historical routes.

**Indicator 4.7.2** Measures to protect such sites are agreed, documented and implemented with local community agreement, where applicable

Verifiers:
- Measures to protect such sites are documented;
- Group Schemes and Large Scale Organisations: Documented procedures

Guidance:
- Cross reference Training from P.6 for workers

**Indicator 4.7.3** Newly discovered sites of significance are investigated by management, consulted with relevant stakeholders and are not impacted by operations until consultation and measures are agreed upon.

Verifiers:
- Interviews with workers and stakeholders

**Criterion 4.8.** The Organization shall uphold the right of local communities to protect and utilize their traditional knowledge and shall compensate local communities for the utilization of such knowledge and their intellectual property. A binding agreement as per Criterion 3.3 shall be concluded between The Organization and the local communities for such utilization through Free, Prior and Informed Consent before utilization takes place, and shall be consistent with the protection of intellectual property rights. (new)

**Indicator 4.8.1** Traditional knowledge* and intellectual property* are protected and compensated for. It is only used when the acknowledged owners of that traditional knowledge* and intellectual property* have provided their Free, Prior and Informed Consent* formalized through a binding agreement*.

Verifiers:
- Contractual Agreements
- Records of Payments
**PRINCIPLE 5: BENEFITS FROM THE FOREST**

*The Organization* shall efficiently manage the range of multiple products and services of the *Management Unit* to maintain or enhance *long-term economic viability* and the range of social and environmental benefits. (P5 P&C V4)

**Criterion 5.1.** *The Organization* shall identify, produce, or enable the production of, diversified benefits and/or products, based on the range of resources and *ecosystem services* existing in the *Management Unit* in order to strengthen and diversify the local economy proportionate to the *scale* and *intensity* of management activities. (C5.2 and 5.4 P&C V4).

| Indicator 5.1.1 The Organisation identifies the range of resources available on the FMU which strengthens and diversifies the local economy. |
| Verifier: Management Plan |

**Guidance**

Evaluation of products produced from resources e.g. firewood, charcoal, poles, droppers, NTFPs, human resources, commercialized livestock production, game authorised to be hunted

| 5.1.2 Consistent with management objectives*, the identified benefits and products are produced |
| Verifiers: Management Plan |
| At least 1 of the following: |
| Sales Invoices and/or delivery notes |
| Transport and/or export permits |
| Harvesting permits |
| Budget - Income sheet, where available |
| Contractual agreements, where applicable |
| Marketing Plan, where available |
| NTFP permits, where relevant |

**Criterion 5.2.** *The Organization* shall normally harvest products and services from the *Management Unit* at or below a level which can be permanently sustained. (C5.6 P&C V4)

| Indicator 5.2.1 Harvesting levels* of timber* and NTFP are based on an analysis of current Best Available Information* on growth and yield; inventory of the forest*; mortality rates; and maintenance of ecosystem functions*. |
| Verifiers: |
| Stem count per hectare: encroacher, protected, non-target species, fodder species, |
| Estimated growth rates |

| Indicator 5.2.2 Based on the harvesting level* analysis, a maximum allowable annual cut for timber and NTFP is |
determined that does not exceed the harvest level that can be permanently sustained including by ensuring that harvest rates do not exceed growth.

Verifiers:
harvesting permit
At least 1 of the following:
Long term Camp based Harvesting Plan & Yield Summary; Allowable Harvest vs Actual Harvest per Camp of Management Unit

Indicator 5.2.3 For the extraction of timber* and non-timber forest products* under The Organization’s* control, a sustainable harvest level is calculated, recorded and adhered to. Sustainable harvest levels are based on Best Available Information*.

Verifiers:
Annual Allowable vs Actual Cut Records per Camp for Charcoal, per FMU for NTFPs and Biomass

**Criterion 5.3.** The Organization shall demonstrate that the positive and negative externalities of operations are included in the management plan. (C5.1 P&C V4)

Indicator 5.3.1 Management Plan includes a budget reflecting the costs and benefits for the mitigation, prevention and/or enhancement of social and environmental impacts

Verifiers:
Management Plan

Guidance
Examples of impacts include:
Negative impacts - veld fires, erosion, poaching, cross reference P6 and P10
Positive impacts - cross reference 4.4.1, P6 and P8

**Criterion 5.4.** The Organization shall use local processing, local services, and local value adding to meet the requirements of The Organization where these are available, proportionate to scale, intensity and risk. If these are not locally available, The Organization shall make reasonable attempts to help establish these services. (C5.2 P&C V4)

This Criterion is fulfilled in Indicator 4.3.1

**Criterion 5.5.** The Organization shall demonstrate through its planning and expenditures proportionate to scale, intensity and risk, its commitment to long-term economic viability. (C5.1 P&C V4)

Indicator 5.5.1 Sufficient funds are allocated and expenditures made to implement the management plan* in order to meet this standard and to ensure long-term* economic viability*.

Verifiers:
1. Budget
2. Invoices
3. Financial statements, if available
### PRINCIPLE 6: ENVIRONMENTAL VALUES* AND IMPACTS

The Organization shall maintain, conserve and/or restore ecosystem services and environmental values of the Management Unit, and shall avoid, repair or mitigate negative environmental impacts. (P6 P&C V4)

#### Criterion 6.1.

The Organization shall assess environmental values in the Management Unit and those values outside the Management Unit potentially affected by management activities. This assessment shall be undertaken with a level of detail, scale and frequency that is proportionate to the scale, intensity and risk of management activities, and is sufficient for the purpose of deciding the necessary conservation measures, and for detecting and monitoring possible negative impacts of those activities. (new)

Indicator 6.1.1 Best Available Information* is used to identify environmental values* within, and, where potentially affected by management activities, outside of the Management Unit*.

Verifiers:
- Field inspection,
- Documented Assessment/ Management Plan

Guidance:
- Appropriate literature review (e.g. Atlas of Namibia; Biological Diversity of Namibia, Red Lists, etc.)
- EIS (www.the-eis.com)
- MET; DoF (Directorate of Forestry; NBRI (National Botanical Research Institute); SEA of Large Scale Bush Thinning, Consultants
- Field survey/Rapid assessment

6.1.2 Assessments of environmental values* are conducted with a level of detail and frequency so that:
1) Impacts of management activities on the identified environmental values* can be assessed as per Criterion* 6.2;
2) Risks* to environmental values* can be identified as per Criterion* 6.2;
3) Necessary conservation* measures to protect values can be identified as per Criterion* 6.3; and,
4) Monitoring* of impacts or environmental changes can be conducted as per Principle* 8.

Verifiers: Field survey/Rapid assessment - are documented & available + interview forest managers

Guidance:
- Results of: Literature review; EIS; Consultations;
- Cross reference to Indicators 8.3, 6.2, 6.3

#### Criterion 6.2.

Prior to the start of site-disturbing activities, The Organization shall identify and assess the scale, intensity and risk of potential impacts of management activities on the identified environmental values. (C6.1 P&C V4)

Indicator 6.2.1 An environmental impact assessment* identifies and assesses potential present and future impacts of management activities on environmental values*, at FMU level

Verifiers:
- Environmental Assessment
- Documented system
### Records of results of assessment

**Guidance:**
In-house assessment and Management Plan
Some circumstances may require a Clearance Certificate from MET

**Criterion 6.3.** The Organization shall identify and implement effective actions to prevent negative impacts of management activities on the environmental values, and to mitigate and repair those that occur, proportionate to the scale, intensity and risk of these impacts. (C6.1 P&C V4)

**Indicator 6.3.1** Management activities are planned to prevent negative impacts and to protect environmental values*.

**Verifiers:**
Basic Management Plan/EMP

**Indicator 6.3.2** Management activities are implemented to prevent negative impacts and to protect environmental values*.

**Verifiers:**
Field Observation

**Indicator 6.3.3** Management activities are implemented to prevent excessive harvesting of timber and NTFPs

**Verifier:**
Field Observation
Production records, Permits, Density estimations

**Guidance:**
SEA

**Indicator 6.3.4** Management activities are implemented to avoid the harvesting of over-sized trees

**Verifier:**
Field Observation
Permits conditions

**Indicator 6.3.5** Management activities prevent negative impacts to environmental values*.

**Verifiers:**
Basic Management Plan/EMP
Field observation

**Indicator 6.3.6** Where negative impacts to environmental values* occur, measures are adopted to prevent further damage, and negative impacts are mitigated* and/or repaired*.

**Verifiers:**
Group Scheme and Large Scale Organisations: Pre-& Post-harvesting checklists and Field observations
Training records, where applicable
Disciplinary action, where applicable
SLIMF and Small Scale Organisations: verbal description and field observation

**Criterion 6.4.** The Organization shall protect rare species and threatened species and their habitats in the Management Unit through conservation zones, protection areas, connectivity and/or (where necessary) other direct measures for their survival and viability. These measures shall be proportionate to the scale, intensity and risk of management activities and to the conservation status and ecological requirements of the rare and threatened species. The Organization shall take into account the geographic range and ecological requirements of rare and threatened species beyond the boundary of the Management Unit, when determining the measures to be taken inside the Management Unit. (C6.2 P&C V4)

**Indicator 6.4.1** Best Available Information* is used to identify rare and threatened species*, and their habitats*, including CITES species (where applicable) and those listed on national, regional and local lists of rare and threatened species* that are present or likely to be present within and adjacent to the Management Unit*.

Verifiers:
Interview with Forest manager
Field observations

Guidance:
Appropriate literature review (e.g. Atlas of Namibia; Biological Diversity of Namibia, Mammals of the Southern African sub-region; Snakes & other reptiles; Frogs of Southern Africa; Roberts Birds of Southern Africa; Namibia Red, Rare & Endemic birds; Trees & Shrubs of Namibia; Red Lists, etc.)
EIS (www.the-eis.com)
MET; Forestry; NBRI; Consultants
Vertebrate fauna & flora lists (including RT&E spp.)

**Indicator 6.4.2** Potential impacts of management activities on rare and threatened species* and their conservation* status and habitats* are identified and management activities are modified to avoid negative impacts.

Verifiers:
One or more of the following:
Rare, threatened and endangered species lists
Indicated on maps (e.g. Vulture nesting sites; unique habitats - hills - with concentrations of RT&E spp.)
Interviews with forest managers
Field observations
Management Plan (changes included)

**Indicator 6.4.3** The rare and threatened species* and their habitats* are protected, including through the provision of conservation zones*, protection areas*, connectivity*, and other direct means for their survival and viability, such as species’ recovery programs.

Verifiers:
Farm Maps to include requirements
### Indicator 6.4.4 Hunting, fishing, trapping and collection of rare or threatened species* is prevented.

Verifiers:
- Permits,
- Field observations,
- Interviews with workers

### Indicator 6.4.5 Invasive alien species (e.g. Opuntia spp.; Prosopis spp.) are located, identified and eradicated throughout the management system.

Verifiers:
- Management Plan
- Discussion with forest managers
- Field observations

### Criterion 6.5. The Organization shall identify and protect representative sample areas of native ecosystems and/or restore them to more natural conditions. Where representative sample areas do not exist or are insufficient, The Organization shall restore a proportion of the Management Unit to more natural conditions. The size of the areas and the measures taken for their protection or restoration, including within plantations, shall be proportionate to the conservation status and value of the ecosystems at the landscape level, and the scale, intensity and risk of management activities. (C6.4 and 10.5 P&C V4 and Motion 2014#7)

### Indicator 6.5.1 Sensitive ecosystems* are identified using Best Available Information* and are protected, where they exist.

Verifiers:
- Management Plan/Supporting documents
- Map
- Field observations

Guidance:
- Sensitive ecosystems* (e.g. mountains/hills/ridges; pans; perennial & ephemeral drainage lines)

### Indicator 6.5.2 Buffer zones around sensitive ecosystems* are maintained.

Verifiers:
- Field observations
- Farm maps

### Indicator 6.5.3 Sensitive Areas* in combination with other components of the conservation areas network* comprise a minimum 10% area of the Management Unit*.

Verifiers:
- Management Plan/Supporting documents
- Map
- Field observations

### Criterion 6.6. The Organization shall effectively maintain the continued existence of naturally occurring native species.
and genotypes, and prevent losses of biological diversity, especially through habitat management in the Management Unit. The Organization shall demonstrate that effective measures are in place to manage and control hunting, fishing, trapping and collecting. (C6.2 and C6.3 P&C V4)

| Indicator 6.6.1 Management activities maintain the plant communities and habitat features* |
| Verifiers: Field observation and verbal description by management and workers* |
| Guidance: Examples include mosaic approach; avoid damaging termittaria/pans/ephemeral drainage line vegetation/habitat |

| Indicator 6.6.2 Management maintains, enhances, or restores* habitat features*, to support biodiversity |
| Verifiers: Field observations |
| Guidance: Cross reference Indicator 8.3 Bush thinning should aim to leave a heterogeneous mix of trees and bush. The veld that remains should have a variety of tree species (including encroacher species), of different size classes, and spaced so that there are some open patches and some dense patches, to provide a variety of habitats for animals. |

| Indicator 6.6.3 Effective measures are taken to manage and control hunting, trapping and collecting activities |
| Verifiers: Permits (MET; CITES) |
| Guidance: Cross reference to P1 for Permits |

| Indicator 6.6.4 Conservation practices for wildlife protection* are in place as per Namibian Legislative requirements |
| Verifier: permits |
| Guidance: Refer to - MET, Nature Conservation Ordinance |

| Indicator 6.6.5 An internal regulation banning and punishing the transportation of and trade in bush meat within the FMU |
| Verifiers: Farm Rules/ procedures Interviews with workers* and management |
| Guidance: |
**Cross reference to P1 for Permits**

**Indicator 6.6.6** A system of regular and punctual controls to ensure hunting policies are respected is implemented

Verifier: Search/Patrol system

**Criterion 6.7.** The Organization shall **protect** or **restore** natural watercourses, **water bodies**, **riparian zones** and their **connectivity**. The Organization shall avoid negative impacts on water quality and quantity and mitigate and remedy those that occur. (C6.5 and 10.2 P&C V4)

**Indicator 6.7.1** Protection* measures are implemented to protect natural watercourses*, water bodies*, riparian zones* and their connectivity*

Verifier: Field observation

**Indicator 6.7.2** Site disturbances do not occur along perennial/ephemeral rivers/drainage lines; omarambas; pans; fountains.

Verifier: Map

**Indicator 6.7.3** The use of pesticides are not permitted for harvesting activities

Verifier: Field Observation

**Guidance:** Chemicals may be utilised for After-care

**Criterion 6.8.** The Organization shall manage the **landscape** in the **Management Unit** to maintain and/or **restore** a varying mosaic of species, sizes, ages, spatial **scales** and regeneration cycles appropriate for the **landscape values** in that region, and for enhancing environmental and economic **resilience**. (C10.2 and 10.3 P&C V4)

**Indicator 6.8.1** A varying mosaic* of species, densities, height/circumference classes, spatial scales*, and regeneration cycles is maintained appropriate to the landscape*.

Verifier: Harvesting Guidelines

**Field observations**

**Indicator 6.8.1** A varying mosaic* of species, densities, height/circumference classes, spatial scales*, and regeneration cycles is restored where it has not been maintained appropriate to the landscape* and management objectives

Verifier: Field observations

**Guidance:** cross reference 8.3.
**Criterion 6.9.** The Organization shall not convert natural forest to plantations, nor natural forests or plantations on sites directly converted from natural forest to non-forest land use, except when the conversion:

a) Affects a very limited portion of the area of the Management Unit, and

b) Will produce clear, substantial, additional, secure long-term conservation benefits in the Management Unit, and

c) Does not damage or threaten High Conservation Values, nor any sites or resources necessary to maintain or enhance those High Conservation Values. (C6.10 P&C V4 and Motion 2014#7)

**Indicator 6.9.1** There is no conversion of natural forest* to plantations*, nor conversion of natural forests* to non-forest* land use, use, except when the conversion:

1) Affects a very limited portion* of the Management Unit*, and

2) The conversion will produce clear, substantial, additional, secure, long-term conservation* benefits in the Management Unit*; and

3) Does not damage or threaten High Conservation Values*, nor any sites or resources necessary to maintain or enhance those High Conservation Values*.

**Verifiers**

Management Plan/Supporting documents

Maps

Forestry regulations adhered

Field observations

**Criterion 6.10.** Management Units containing plantations that were established on areas converted from natural forest after November 1994 shall not qualify for certification, except where:

a) Clear and sufficient evidence is provided that The Organization was not directly or indirectly responsible for the conversion, or

b) The conversion affected a very limited portion of the area of the Management Unit and is producing clear, substantial, additional, secure long-term conservation benefits in the Management Unit. (C10.9 P&C V4)

There are no Plantations within the forestry context in Namibia

---

**PRINCIPLE 7: MANAGEMENT PLANNING**

The Organization shall have a management plan consistent with its policies and objectives and proportionate to scale, intensity and risks of its management activities. The management plan shall be implemented and kept up to date based on monitoring information in order to promote adaptive management. The associated planning and procedural documentation shall be sufficient to guide staff, inform affected stakeholders and interested stakeholders and to justify management decisions. (P7 P&C V4)

**Criterion 7.1.** The Organization shall, proportionate to scale, intensity and risk of its management activities, set policies (visions and values) and objectives for management, which are environmentally sound, socially beneficial and
economically viable. Summaries of these policies and objectives shall be incorporated into the management plan, and publicized. (C7.1a P&C V4)

Indicator 7.1.1. The organization's vision, values and broader objectives are reflected in their management plan and/or separate policies that promote environmentally sound, socially beneficial and economically viable forestry.
Verifiers:
Management plan and/or policies
SLIMF: Interview with management and stakeholders to confirm
GS and single site: documented and publicly available*

Criterion 7.2. The Organization shall have and implement a management plan for the Management Unit which is fully consistent with the policies and management objectives as established according to Criterion 7.1. The management plan shall describe the natural resources that exist in the Management Unit and explain how the plan will meet the FSC certification requirements. The management plan shall cover forest management planning and social management planning proportionate to scale, intensity and risk of the planned activities. (C7.1 P&C V4)

Indicator 7.2.1 The management plan* includes management actions, procedures, strategies and measures to achieve the management objectives* as indicated in Annex E.
Verifiers:
Management Plan in accordance with Annex for Scale, Intensity and Risk

Criterion 7.3. The management plan shall include verifiable targets by which progress towards each of the prescribed management objectives can be assessed. (new)

Indicator 7.3.1 Verifiable targets*, and the frequency that they are assessed, are established for monitoring the progress towards each management objective*.
Verifiers:
Management plan

Guidance:
Cross reference to Principle 8

Criterion 7.4. The Organization shall update and revise periodically the management planning and procedural documentation to incorporate the results of monitoring and evaluation, stakeholder engagement or new scientific and technical information, as well as to respond to changing environmental, social and economic circumstances. (C7.2 P&C V4)

Indicator 7.4.1 The management plan* is revised and updated every 5 years consistent with Annex E and Monitoring Annex to incorporate:
1) Monitoring* results, including results of certification audits;
2) Evaluation results;
3) Stakeholder engagement* results;
4) New scientific and technical information, and
5) Changing environmental, social, or economic circumstances.
Verifiers:
Management plan

Guidance:
major updates every 5 years
minor updates where significant changes are made

**Criterion 7.5.** The Organization shall make **publicly available** a summary of the **management plan** free of charge. Excluding **confidential information**, other relevant components of the **management plan** shall be made available to **affected stakeholders** on request, and at cost of reproduction and handling. (C7.4 P&C V4)

Indicator 7.5.1 A summary of the management plan* excluding confidential information* is made publicly available* at no cost.
Verifiers:
Stakeholder interviews
Guidance:
summary of Management plan and/or maps

**Criterion 7.6.** The Organization shall, proportionate to **scale, intensity and risk** of management activities, proactively and transparently engage **affected stakeholders** in its management planning and monitoring processes, and shall engage **interested stakeholders** on request. (C4.4 P&C V4)

Indicator 7.6.1 Engagement* is used to ensure that affected and interested stakeholders* are proactively and transparently engaged in management activities which affect their interests, where applicable

Guidance:
Cross reference:
1) Dispute* resolution processes (Criterion* 1.6, Criterion* 2.6, Criterion* 4.6);
2) Identification of rights (Criterion* 3.1, Criterion* 4.1), sites (Criterion* 3.5, Criterion* 4.7) and impacts (Criterion* 4.5);
3) Local communities'* socio-economic development activities (Criterion* 4.4); and

Indicator 7.6.2 Organisation shall ensure effective engagement with identified stakeholders.
Verifier:
Documented Stakeholder list and records of engagement

Guidance:
Examples include: Photographic evidence, Use of community radios, social media
### Annex E : Elements of the Management Plan

**PRINCIPLE 8: MONITORING AND ASSESSMENT**

- **Criterion 8.1.** The Organization shall monitor the implementation of its Management Plan, including its policies and management objectives, its progress with the activities planned, and the achievement of its verifiable targets. (new)

  - **Indicator 8.1.1** Procedures are documented for monitoring the implementation of the management plan including its policies and management objectives and achievement of verifiable targets.

    - **Verifiers:**
      - Management Plan and/or Procedures with consideration to scale, intensity and risk of the Organization.

  - **Indicator 8.1.2** Procedures are implemented for the monitoring as per the management plan including its policies and management objectives and achievement of verifiable targets.

    - **Verifiers:**
      - Monitoring reports and/or records
      - Field observations

- **Criterion 8.2.** The Organization shall monitor and evaluate the environmental and social impacts of the activities carried out in the Management Unit, and changes in its environmental condition. (C8.2 P&C V4)

  - **Indicator 8.2.1** The social impacts of management activities are monitored consistent with Annex G.

    - **Verifiers:**
      - Management Plan/Supporting documents
      - Monitoring reports/records/data base
      - Field observations

  - **Indicator 8.2.2** The environmental impacts of management activities are monitored consistent with Annex G.

    - **Verifiers:**
      - Management Plan/Supporting documents
      - Monitoring reports/records/data base
      - Field observations

  - **8.2.3** Changes in environmental conditions are monitored consistent with Annex G.

    - **Verifiers:**
      - Regrowth (coppice/seedlings)
      - Sustainability (age/growth rate/spp.)
      - Invasive alien spp.
      - Poisonous plants/unpalatable shrubs
Erosion - field inspection
Grass biomass changes
Wildlife changes

Guidance:
Scientific methods of monitoring changes e.g. photographic monitoring points

**Criterion 8.3** The Organization shall analyze the results of monitoring and evaluation and feed the outcomes of this analysis back into the planning process. (C8.4 P&C V4)

**Indicator 8.3.1** Adaptive management* procedures are implemented so that monitoring* results feed into periodic updates to the planning process and the resulting management plan*.

Verifier:
Management plan and/or Update/change matrix

Guidance:
major update of management plan every 5 years, minor updates in management plan for significant changes from the results of monitoring assessments

**Criterion 8.4.** The Organization shall make publicly available a summary of the results of monitoring free of charge, excluding confidential information. (C8.5 P&C V4)

This criterion is fulfilled within Indicators 7.4.1 and 7.5.1

**Criterion 8.5.** The Organization shall have and implement a tracking and tracing system proportionate to scale, intensity and risk of its management activities, for demonstrating the source and volume in proportion to projected output for each year, of all products from the Management Unit that are marketed as FSC certified. (C8.3 P&C V4)

**Indicator 8.5.1.** A system is implemented to track and trace all products that are marketed as FSC certified.

Verifier:
Group Scheme and Large – Medium Scale Organisations: Documented Procedures
SLIMF and Small Scale Organisations: Verbal description of system used

**Indicator 8.5.2** Information about all products sold is compiled and documented, including:

1) species name;  
2) Product description;  
3) Volume (or quantity) of product;  
4) Information to trace the material to the source  
7) Whether or not the material was sold as FSC certified.

Verifier:
sales summary, production records

**Indicator 8.5.3** Sales invoices and/or delivery documentation are kept for a minimum of five years for all products sold with an FSC claim, which identify at a minimum, the following information:
1) Name and address of purchaser;
2) The date of sale;
3) species name;
4) Product description;
5) The volume (or quantity) sold;
6) Certificate code; and
7) The FSC Claim “FSC 100%” identifying products sold as FSC certified.

Verifiers:
Sales invoices, Delivery notes and Transport Permits are maintained

Annex F: Monitoring

PRINCIPLE 9: HIGH CONSERVATION VALUES

The Organization shall maintain and/or enhance the High Conservation Values in the Management Unit through applying the precautionary approach. (P9 P&C V4)

Criterion 9.1. The Organization, through engagement with affected stakeholders, interested stakeholders and other means and sources, shall assess and record the presence and status of the following High Conservation Values in the Management Unit, proportionate to the scale, intensity and risk of impacts of management activities, and likelihood of the occurrence of the High Conservation Values:

HCV 1 – Species diversity. Concentrations of biological diversity including endemic species, and rare, threatened or endangered species, that are significant at global, regional or national levels.

HCV 2 – Landscape-level ecosystems and mosaics. Intact forest landscapes and large landscape-level ecosystems and ecosystem mosaics that are significant at global, regional or national levels, and that contain viable populations of the great majority of the naturally occurring species in natural patterns of distribution and abundance.

HCV 3 – Ecosystems and habitats, Rare, threatened, or endangered ecosystems, habitats or refugia.

HCV 4 – Critical ecosystem services. Basic ecosystem services in critical situations, including protection of water catchments and control of erosion of vulnerable soils and slopes.

HCV 5 – Community needs. Sites and resources fundamental for satisfying the basic necessities of local communities or Indigenous Peoples (for livelihoods, health, nutrition, water, etc.), identified through engagement with these communities or Indigenous Peoples.

HCV 6 – Cultural values. Sites, resources, habitats and landscapes of global or national cultural, archaeological or historical significance, and/or of critical cultural, ecological, economic or religious/sacred importance for the traditional cultures of local communities or Indigenous Peoples, identified through engagement with these local communities or Indigenous Peoples. (C9.1 P&C V4 and Motion 2014#7)

Indicator 9.1.1 An assessment is completed that records the location, status and condition of High Conservation
<table>
<thead>
<tr>
<th>Value** Categories 1-6, in accordance with Annex I</th>
<th>Verifiers:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Results of assessments</td>
<td></td>
</tr>
</tbody>
</table>

**Indicator 9.1.2** The assessment uses results from engagement** with affected** and interested stakeholders** as identified in Annex I

**Verifiers:**
- Results of stakeholder consultations are documented

**Criterion 9.2.** The Organization shall develop effective strategies that maintain and/or enhance the identified High Conservation Values*, through engagement with affected stakeholders, interested stakeholders and experts. (C9.2 P&C V4)

**Indicator 9.2.1** Threats to High Conservation Values* are identified

**Verifiers:**
- Results of Assessments
- Cross reference to P6

**Indicator 9.2.2** Management strategies and actions are developed to maintain and/or enhance the identified High Conservation Values* and associated High Conservation Value Areas* (Annex I) prior to implementing potentially harmful management activities.

**Verifiers:**
- Management plan
- Maps

9.2.3 Affected** and interested stakeholders** and experts are engaged in the development of management strategies and actions to maintain and/or enhance the identified High Conservation Values*. Developed strategies are effective.

**Verifiers:**
- Results of stakeholder consultation (documented)

**Criterion 9.3.** The Organization shall implement strategies and actions that maintain and/or enhance the identified High Conservation Values*. These strategies and actions shall implement the precautionary approach and be proportionate to the scale, intensity and risk of management activities. (C9.3 P&C V4)

**Indicator 9.3.1** The High Conservation Values* and the High Conservation Value Areas* on which they depend are maintained and/or enhanced, including by implementing the strategies developed (Annex I).

**Verifiers:**
- Management plan
- Maps

**Indicator 9.3.2** The strategies and actions prevent damage and avoid risks to High Conservation Values*, even when the scientific information is incomplete or inconclusive, and when the vulnerability and sensitivity of High Conservation Values* are uncertain.

**Verifier:**
- Management Plan
Indicator 9.3.3 Activities that harm High Conservation Values* cease immediately and actions are taken to restore* and protect the High Conservation Values*.
Verifiers:
Management Plan
Field Observation

| Criterion 9.4. The Organization shall demonstrate that periodic monitoring is carried out to assess changes in the status of High Conservation Values, and shall adapt its management strategies to ensure their effective protection. The monitoring shall be proportionate to the scale, intensity and risk of management activities, and shall include engagement with affected stakeholders, interested stakeholders and experts. (C9.4 P&C V4) |
| Indicator 9.4.1 A program of periodic monitoring* that is sufficient in scope and detail that (Annex I) assesses: 1) Implementation of strategies; 2) The status of High Conservation Values* including High Conservation Value Areas* on which they depend; and 3) The effectiveness of the management strategies and actions for the protection* of High Conservation Value* to fully maintain and/or enhance the High Conservation Values*. Verifiers: Management plan Monitoring plan |
| Guidance Major Review/revision every 5 years Revision to occur where significant changes arise |
| Indicator 9.4.2 The monitoring* program includes engagement* with affected* and interested stakeholders* and experts if/when required. Verifiers: Results of stakeholder consultation (documented) |
| Indicator 9.4.3 Management strategies and actions are adapted when monitoring* or other new information shows that these strategies and actions are insufficient to ensure the maintenance and/or enhancement of High Conservation Values*. Verifiers: Management plan Monitoring plan |

Annex G: HCV Framework

PRINCIPLE 10: IMPLEMENTATION OF MANAGEMENT ACTIVITIES
Management activities conducted by or for **The Organization** for the **Management Unit** shall be selected and implemented consistent with The Organization’s economic, environmental and social policies and **objectives** and in compliance with the Principles and Criteria collectively. (new)

<table>
<thead>
<tr>
<th><strong>Criterion 10.1.</strong> After harvest or in accordance with the <strong>management plan</strong>, <strong>The Organization</strong> shall, by natural or artificial regeneration methods, regenerate vegetation cover in a timely fashion to pre-harvesting or more <strong>natural conditions</strong>. **Criterion 10.5** *The Organization* shall use silvicultural practices that are ecologically appropriate for the vegetation, species, sites and management objectives. (new)

Indicator 10.5.1 Silvicultural practices* are implemented that are ecologically appropriate for the vegetation, species, sites and management objectives*.

Verifiers:
- Management plan
- Field Observations

**Criterion 10.6.** *The Organization* shall minimize or avoid the use of *fertilizers*. When fertilizers are used, *The Organization* shall demonstrate that use is equally or more ecologically and economically beneficial than use of silvicultural systems that do not require fertilizers, and prevent, mitigate, and/or repair damage to *environmental values*, including soils. (C10.7 P&C V4 and Motion 2014#7)

Indicator 10.6.1 The use of fertilizer is avoided. Should fertilizers be used, appropriate stock control must be done + records of applications - fertilizer-type, sites, application rates; documented sites on farm maps; after-care & monitoring, including control-sites of no applications.

Verifiers:
- Interviews with stakeholders
- Field Observations

**Criterion 10.7** *The Organization* shall use integrated pest management and *silviculture* systems which avoid, or aim at eliminating, the use of chemical *pesticides*. *The Organization* shall not use any chemical pesticides prohibited by FSC policy. When pesticides are used, *The Organization* shall prevent, mitigate, and/or repair damage to environmental values and human health. (C6.6 and C10.7 P&C V4)

Indicator 10.7.1 Silvicultural systems* used, avoid or minimize *the frequency, extent and amount of chemical pesticide* applications

Verifiers:
- Chemical records,
- field inspections

Indicator 10.7.2 Chemical pesticides* prohibited by FSC’s Pesticide Policy are not used or stored in the Management Unit* unless FSC has granted derogation.

Verifiers:
- Approved Derogations,
- Chemical Records

Indicator 10.7.3. Pesticides are not used to manipulate the FMU landscape, but only used in small quantities.

Verifiers:
- Interviews with stakeholders
- Field Observations
- Management Plan
Guidance:
Examples of Acceptable Reasons for Pesticide use - clearing of fence-lines/firebreaks/roads/pipelines to enhance farming activities.

Indicator 10.7.4 Records of pesticide* usage are maintained, including trade name, active ingredient, quantity of active ingredient used, period of use, location and area of use and reason for use.
Verifiers:
Chemical records

Indicator 10.7.5 Procedures are developed on the use of pesticides* complies with the ILO document “Safety in the use of chemicals at work” regarding requirements for the transport, storage, handling, application and emergencies for clean-up following accidental spillages.
Verifiers:
Procedures on Chemical Use

Indicator 10.7.6 Procedures are implemented on the use of pesticides
Verifiers:
Chemical storage facilities,
PPE,
Training of chemical operators

Indicator 10.7.7 If pesticides* are used, application methods minimize quantities used, while achieving effective results, and provide effective protection* to surrounding landscapes*.
Verifiers:
Chemical records,
Field inspections

10.7.8. When pesticides* are used:
Objective evidence demonstrates that the pesticide* is the only effective, practical and cost-effective way to control the pest.

Guidance:
Cost-benefit analysis

Criterion 10.8. The Organization shall minimize, monitor and strictly control the use of biological control agents in accordance with internationally accepted scientific protocols. When biological control agents are used, The Organization shall prevent, mitigate, and/or repair damage to environmental values. (C6.8 P&C V4)

Indicator 10.8.1 The use of biological control agents* complies with Namibian Legislation & internationally accepted scientific protocols*, Use is minimized, monitored* and controlled. Records are maintained regarding type, quantity, period, location and reason for use.
Verifiers:
Records of release of biological control agents
Stakeholder interviews
Indicator 10.8.2 Damage to environmental values* caused by the use of biological control agents* is prevented and mitigated or repaired where damage occurs.

Guidance:
Cross reference to P8 and P6

**Criterion 10.9** The Organization shall assess risks and implement activities that reduce potential negative impacts from natural hazards proportionate to scale, intensity, and risk. (new)

Indicator 10.9.1 Potential negative impacts of natural hazards* on infrastructure*, forest* resources and communities in the Management Unit* are assessed and mitigated

Verifier:
Verbal description from management

Indicator 10.9.2 The risk* for management activities to increase the frequency, distribution or severity of natural hazards* is identified and reduced for those hazards* that may be influenced by management.

Verifier:
Infield observation
Firefighting plan

**Criterion 10.10** The Organization shall manage infrastructural development, transport activities and silviculture so that water resources and soils are protected, and disturbance of and damage to rare and threatened species, habitats, ecosystems and landscape values are prevented, mitigated and/or repaired. (C6.5 P&C V4)

Indicator 10.10.1 Development, maintenance and use of infrastructure*, as well as transport activities, are managed to protect environmental values* identified in Criterion* 6.1

Guidance:
Clearance certificate, Road maintenance plan, Management Plan
Erosion control
Firebreaks

Indicator 10.10.2 Silvicultural systems* are managed to ensure protection of the environmental values* identified in Criterion* 6.1.

Verifier:
Infield Inspection

10.10.3 Disturbance or damages to water courses*, water bodies*, soils, rare and threatened species*, habitats*, ecosystems* and landscape values* are prevented, mitigated and repaired in a timely manner*, and management activities modified to prevent further damage.

Verifier:
Infield inspection
Evidence of Corrective Action

**Criterion 10.11.** The Organization shall manage activities associated with harvesting and extraction of timber and
non-timber forest products so that environmental values are conserved, merchantable waste is reduced, and damage to other products and services is avoided. (C5.3 and C6.5 P&C V4)

<table>

<td><strong>Forest Act 12 of 2001 as amended Act 13 of 2005 to Harvest, Transport, Market, or Export. Permit issued by Ministry of Agriculture, Water and Forestry, Directorate of Forestry, on payment of fees.</strong></td>
</tr>
</tbody>
</table>

**Taxes and Fees**

• **Payment of royalties and harvesting fees**
| Legislation covering payment of all legally required forest harvesting specific fees such as royalties, stumpage fees and other volume based fees. It also includes payments of the fees based on correct classification of quantities, qualities and species. Incorrect classification of forest products is a well-known issue often combined with bribery of officials in charge of controlling the classification. |
- **Value added and sales taxes**
  Legislation covering different types of sales taxes which apply to the material being sold, including selling material as growing forest (standing stock sales).

- **Income and profit taxes**
  Legislation covering income and profit taxes related to the profit derived from sale of forest products and harvesting activities. This category is also related to income from the sale of timber and does not include other taxes generally applicable for companies or related to salary payments.

**Timber Harvesting Activities**

- **Timber harvesting regulations**
  Any legal requirements for harvesting techniques and technology including selective cutting, shelter wood regenerations, clear felling, transport of timber from felling site and seasonal limitations etc. Typically this includes regulations on the size of felling areas, minimum age and/or diameter for felling activities and elements that shall be preserved during felling etc. Establishment of skidding or hauling trails, road construction, drainage systems and bridges etc. shall also be considered as well as planning and monitoring of harvesting activities. Any legally binding codes for harvesting practices shall be considered.

- **Protected sites and species**
  Covers legislation related to protected areas as well as protected, rare or endangered species, including their habitats and potential habitats.

- **Environmental requirements**
  Covers legislation related to environmental impact assessment in connection with harvesting, acceptable level for soil damage, establishment of buffer zones (e.g. along water courses, open areas, breeding sites), maintenance of retention trees on felling site, sessional limitation of harvesting time, and environmental requirements for forest machineries.

- **Health and safety**
  Legally required personal protection equipment for persons involved in harvesting activities, use of safe felling and transport practice, establishment of protection zones around harvesting sites, and safety requirements to machinery used. Legally required safety requirements in relation to chemical usage. The health and safety requirements that shall be considered relate to operations in the forest (not office work, or other activities less related to actual forest operations).

- **Legal employment**
  Legal requirements for employment of personnel involved in harvesting activities including requirement for contracts and working permits, requirements for obligatory insurances, requirements for competence certificates and other training requirements, and payment of social and income taxes withheld by employer. Furthermore, the points cover observance of minimum working age and minimum age for personal involved in hazardous work, legislation against forced and compulsory labour, and discrimination and freedom of association.

| 10. | Environmental Management Act 7 of 2007: |
  The Forest Act consolidates the laws relating to the use and management of forests and forest produce; it provides for the control of forest fires and creates a Forestry Council. It replaces the Preservation of Trees and Forests Ordinance of 1952 and the 1968 Forest Act. The 2001 Forest Act defines forest produce in very broad terms as anything which grows or is naturally found in a forest. The Act is formulated around the tenets of sustainable management of forests, and the purpose for which forest resources are managed and developed. This also includes the planting of trees where necessary, as well as soil conservation, the safekeeping of water resources and the maintenance of biological diversity. |
  The Environmental Management Act is an important tool in terms of environmental protection. The Act requires adherence to the principle of optimal sustainable yield in the exploitation of all natural resources.
The Act gives effect to Article 95 (l) of the Namibian Constitution by establishing general principles for the management of the environment and natural resources.

The principles of environmental management have to be applied by government institutions and private persons including companies, institutions and organisations, when doing or planning things which may have a significant effect on the environment. These principles are well elaborated in Section 3 (2) of the Act:

(a) renewable resources must be used on a sustainable basis for the benefit of present and future generations;
(b) community involvement in natural resources management and the sharing of benefits arising from the use of the resources, must be promoted and facilitated;
(c) the participation of all interested and affected parties must be promoted and decisions must take into account the interest, needs and values of interested and affected parties;
(d) equitable access to environmental resources must be promoted and the functional integrity of ecological systems must be taken into account to ensure the sustainability of the systems and to prevent harmful effects;
(e) assessments must be undertaken for activities which may have a significant effects on the environment or the use of natural resources;
(f) sustainable development must be promoted in all aspects relating to the environment;
(g) Namibia's cultural and natural heritage including, its biological diversity, must be protected and respected for the benefit of present and future generations;
(h) the option that provides the most benefit or causes the least damage to the environment as a whole, at a cost acceptable to society, in the long term as well as in the short term must be adopted to reduce the generation of waste and polluting substances at source;
(i) the reduction, re-use and recycling of waste must be promoted;
(j) a person who causes damage to the environment must pay the costs associated with rehabilitation of damage to the environment and to human health caused by pollution, including costs for measures as are reasonably required to be implemented to prevent further environmental damage;
(k) where there is sufficient evidence which establishes that there are threats of serious or irreversible damage to the environment, lack of full scientific certainty may not be used as a reason for postponing cost-effective measures to prevent environmental degradation; and
(l) damage to the environment must be prevented and activities which cause such damage must be reduced, limited or controlled.

To achieve this, the Act provides for administrative mechanisms such as the necessity of environmental clearance certificates and environmental assessments.

11. **Nature Conservation General Amendment Act 31 of 1990**

12. **Nature Conservation Ordinance 4 of 1975**
   One of the major biodiversity related laws in Namibia is the legislation governing the conservation of wildlife, and protected areas, the Nature Conservation Ordinance 4 of 1975. With the introduction of communal conservancies, amendments to the ordinance and its regulations were made and came into effect in 1996. The amendments were made to take into account the establishment of conservancies and Wildlife Councils. In terms of the amendment, rural communities have to form a conservancy in order to be able to acquire the use-right over wildlife. Wildlife conservancies are gaining importance granting communities custodianship of their natural resources particularly wildlife and fish.

Protected tree species according to the Nature Conservation Ordinance No. 4 of 1975 (See Appendix C of AD33-NA for lists).

13. Protected tree species according to the Otjiworongo Forestry District Office (See Appendix C of AD33-NA for lists).

17. **Social Security Act, 2001**

18. **Workman's Compensation Act, 1995**
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **19.** | **Labour Act 11 of 2007**  
**Third Party Rights**  
- **Customary rights**  
  Legislation covering customary rights relevant to forest harvesting activities including requirements covering sharing of benefits and indigenous rights  
- **Free prior and informed consent (FPIC)**  
  Legislation covering “free prior and informed consent” in connection with transfer of forest management rights and customary rights to the organisation in charge of the harvesting operation  
- **Rights of indigenous peoples**  
  Legislation that regulates the rights of indigenous people as far as it’s related to forestry activities. Possible aspects to consider are land tenure, right to use certain forest related resources or practice traditional activities, which may involve forest lands |
| **20.** | **Customary Law:**  
Despite the legal influence of the ex-colonial powers, a large number of Namibians still live under indigenous customary law. Legal pluralism prevails, hence two or more types of law or legal traditions operate simultaneously. Before the arrival of the colonists the indigenous populations have lived for generations according to their own distinctive laws. Customary law was passed on orally from generation to generation. Article 66 of the Namibian Constitution lays the foundation for the constitutional recognition of customary law. It states that both the customary law and the common law of Namibia in force on the date of Independence shall remain valid to the extent that such customary or common law does not conflict with the Constitution or any other statutory law. |
| **21.** | **Council of Traditional Leaders Act 13 of 1997 (Customary Law):**  
This Act establishes the Council of Traditional Leaders referred to in Article 102(5) of the Namibian Constitution. It requires that any draft legislation pertaining to communal land must be laid before the Council before it is introduced in the National Assembly. It came into force on 31 March 1998 (GN 64/1998, GG 1828). |
| **22.** | **Cultural Promotion Ordinance 9 of 1980**  
(Culture and cultural Institutions) |
| **23.** | **Traditional Authorities Act 25 of 2000**  
(Customary Law):  
This Act provides for the election or recognition of traditional authorities and sets forth their functions, duties and powers. It replaces the Traditional Authorities Act 17 of 1995. It came into force on 17 May 2001 (GG 2532).  
It is the overall responsibility of traditional authorities to supervise and ensure the observance of the customary law of that community by its members. As to nature conservation it is one of the duties of a traditional authority to ensure that members of the traditional community use the natural resources at their disposal on a sustainable basis and in a manner that keeps the environment and maintains the ecosystem for the benefit of all Namibians. Customary law plays an important role in the sustainable development of natural resources and the protection of biological diversity as it incorporates a broad knowledge of ecosystems relationships. |
| **24.** | **Access to Biological Resources and Associated Traditional Knowledge Bill**  
This was drafted with the objective to protect biodiversity and traditional knowledge. The Bill applies to the derivatives of the biological resources, community knowledge and technologies, local and indigenous farming communities, and plant breeders. The benefit derived from the resource that is found within a specific area is limited to the inhabitants of that area. The Bill prohibits patents over life forms and biological processes. Furthermore, it recognises the rights of local and indigenous communities, and lays down a platform for the application of customary law to community rights. Local communities will be entitled to exercise their inalienable right to access, use, exchange, or share their biological resources in sustaining their livelihood systems, as regulated by their customary practices and laws. |
### Trade and Transport

- **Classification of species, quantities, qualities**
  Legislation regulating how harvested material is classified in terms of species, volumes and qualities in connection with trade and transport. Incorrect classification of harvested material is a well-known method to reduce/avoid payment of legality prescribed taxes and fees.

- **Trade and transport**
  All required trading permits shall exist as well as legally required transport document which accompany transport of wood from forest operation.

- **Offshore trading and transfer pricing**
  Legislation regulating offshore trading. Offshore trading with related companies placed in tax havens combined with artificial transfer prices is a well-known way to avoid payment of legally prescribed taxes and fees to the country of harvest and considered as an important generator of funds that can be used for payment of bribery and black money to the forest operation and personal involved in the harvesting operation. Many countries have established legislation covering transfer pricing and offshore trading. It should be noted that only transfer pricing and offshore trading as far as it is legally prohibited in the country, can be included here.

<td>Pollution Control and Waste Management Bill</td>
</tr>
</tbody>
</table>
|   | This Bill aims to promote sustainable development; to provide for the establishment of a Pollution Control and Waste Management Unit; to prevent and regulate the discharge of pollutants to the air, water and
land, to regulate noise, dust and odour pollution, to make provision for the establishment of an appropriate framework for integrated pollution prevention and control, to establish a system of waste planning and management and to enable Namibia to comply with its obligations under international law in this regard.

46. **Security Enterprises and Security Officers Act 19 of 1998**

47. **Soil Conservation Act 76 of 1969**

This Act makes provision for the prevention and control of soil erosion and the protection, improvement and conservation of soil, vegetation and water supply sources and resources. The Second Soil Conservation Amendment Act applies the Soil Conservation Act to Namibia and deals mainly with soil conservation, soil stabilisation and fire protection. This act also deals with construction of impoundments (section 4: to impound or store such water, or impound or store more than 20,000 m$^3$ of such water).

This Act is being revised by the Ministry of Agriculture, Water and Forestry as part of the new Conservation of Agricultural Resources Bill.

48. **Water Act 54 of 1956**

Control and use of surface and subterranean water, water abstraction, storage and use. Effluent discharge and pollution of water.

49. **Water Resources Management Act 24 of 2004**

This Act has been approved and published in the Government Gazette, however, it has not yet come into force as a date for commencement of the Act as prescribed by Section 138(1)(b) of the same Act has not yet been determined by the Minister. Once the Act is in force, the Water Act of 1956 will be repealed as whole. The Act is based on the National Water Policy and provides for the management, development, protection, conservation, and use of water resources. It establishes the Water Advisory Council, the Water Regulatory Board and the Water Tribunal; and it provides for incidental matters. The objective of this Act is to ensure that Namibia's water resources are managed, developed, protected, conserved and used in a sustainable manner for the benefit of every Namibian.

50. **Local Authorities Act 23 of 1992**

51. **Public Service Act 13 of 1995**

52. **Regional Council's Act 22 of 1992**

53. **Weeds Ordinance 19 of 1957.**

This Ordinance provides for the eradication of plants which are identified as “weeds” by proclamation in the Gazette.

B. REGULATIONS PERTINENT TO FORESTRY RELATED TO AND EMERGING FROM NATIONAL LEGISLATION AND OTHER LEGISLATIVE INSTITUTIONS:

54. **Environmental Policy documents**

### INTERNATIONAL AGREEMENTS PERTINENT TO FORESTRY

55. **Namibia's Policy on Forests**

Biodiversity conservation is central to the 2001 Development Forestry Policy for Namibia, which aims to reconcile rural development with biodiversity conservation by empowering farmers and local communities to manage forest resources on a sustainable basis. The policy identifies effective property rights; a supportive regulatory framework; good extension services; community forestry; and forest research, education and training as instruments essential to the successful implementation of sustainable forestry management in Namibia. The policy also paves the way for the establishment of community forests and their custodianship by the people most dependent on such resources. In 2005, the Ministry of Agriculture, Water and Forestry’s Directorate of Forestry introduced the Community Forestry Guidelines. The main objective of these guidelines is to provide all stakeholders with a standard for establishing and managing community forests, by describing the legal procedures involved in setting up a community forest; describing the organisational arrangements and administrative procedures necessary for the sustainable management of community forests; and by specifying the respective roles of government forestry officials, communities and other stakeholders involved.

56. **Article 144 of the Namibian Constitution incorporates international law explicitly as law of the land:** it needs no legislative act to become so. International law is thus integrated into domestic law. National authorities and the judiciary in particular can, therefore, apply international law directly on the national level, before cases are taken to regional or international judicial or quasi-judicial bodies. However, international law has to conform to the Constitution in order to apply domestically. Whenever a treaty provision or other rule of international law is inconsistent with the Namibian Constitution, the latter will prevail. In Namibia, a treaty will be binding in terms of Article 144, if the relevant international and constitutional requirements have been met in terms of the law of treaties, and the Namibian Constitution. International agreements, therefore, will become Namibian law when they come into force for Namibia.

57. **Convention on Biological Diversity:**

The CBD was signed by 150 government leaders at the 1992 Rio Earth Summit and entered into force in December 1993. There are currently 188 Parties to the Agreement. The three objectives of the Convention are: the conservation of biodiversity, the sustainable use of biological resources and the fair and equitable sharing of benefits arising from the use of genetic resources. The principles of the CBD are broad in scope and unlike CITES, the CBD does not contain detailed provisions on implementation. Accordingly, implementation of the CBD depends on the incorporation of the Convention and associated policies and guidelines into the national legislation of Member States.

The CBD was signed by Namibia on 12 June 1992 in Rio de Janeiro and ratified it on 18 March 1997. Accordingly Namibia is obliged to ensure that its domestic legislation conforms to the objectives and obligations of the CBD. Namibia gives effect to the CBD inter alia by implementing the National Biodiversity Strategy and Action Plan and has issued its fourth national report under the CBD.

CITES (1973) aims to protect certain endangered species from over-exploitation by means of a system of import-export permits. The Convention includes animals and plants whether dead or alive, and any recognisable parts of derivatives thereof. Appendix I to the Convention covers endangered species, trade in which is to be tightly controlled; appendix II covers species that may become endangered unless trade is regulated; appendix III covers species that any party wishes to regulate and requires international cooperation to control trade; and appendix IV contains model permits. Permits are required for species listed in...
appendices I and II stating that export / import will not be detrimental to the survival of the species. The CITES Secretariat is administered by UNEP and is located at Geneva, Switzerland.

59. **International Labour Organisation (ILO):** with specific reference to

- ILO Code of Practice on Safety and Health in Forestry Work (ILO 1998)
- ILO Safety and Health in the use of Agrochemicals, A guide. 1991
- ILO Safety in the use of Chemicals at Work (Code of Practice), 1993
- Convention 29: Forced Labour, 1930
- Convention 98: Right to Organise and Bargain Collectively, 1949
- Convention 100: Equal remuneration, 1951
- Convention 105: Abolition of Forced Labour, 1957
- Convention 111: Discrimination (occupation and Employment), 1958
- Convention 131: Minimum Wage Fixing, 1970
- Convention 138: Minimum Age for Working, 1973
- Convention 141: Rural Worker’s Organisations, 1975
- Convention 142: Human Resources Development, 1975
- Convention 143: Migrant Workers (Supplementary Provisions), 1975
- Convention 144: Tripartite Consultation (International Labour Standards), 1976
- Convention 150: Labour Administration, 1978
- Convention 158: Termination of Employment, 1982
- Convention 169: Indigenous and Tribal People, 1989
- Convention 182: Worst Forms of Child Labour, 1999
- Convention 184 and Recommendation 192 on Safety and Health in Agriculture, 2001
- Guidelines for worker’s health surveillance
- Guidelines for Labour Inspection in Forestry 2005
- Guidelines for Occupational Health and Safety
- Protection of Worker’s personal data

60. **IUCN Red List of Threatened Species**

signature: 24 October 1994
ratification: 16 May 1997

63. **The African Convention on the Conservation of Nature and Natural Resources:**

Participating and signatory states undertake to adopt the measures necessary to ensure conservation, utilisation and development of soil, water, floral and faunal resources in accordance with scientific principles and with due regard to the best interests of the people (Article II); to take effective measures to conserve and improve the soil and to control erosion and land use (Article IV); and to establish policies to conserve, utilise and develop water resources, prevent pollution and control water use (Article V). Furthermore, the Convention imposes on states the obligation to protect flora and ensure its best utilisation, the management of forests and control of burning, land clearance and overgrazing (Article VI); and to conserve faunal resources and use them wisely, manage populations and habitats, control hunting, capture and fishing, and prohibit the use of poisons, explosives and automatic weapons in hunting (Article VII). States are required to tightly control traffic in trophies, to prevent trade in illegally killed and obtained trophies and to establish and maintain conservation areas (Article X). A list of protected species which enjoy
full total protection, and a list of species, which may be taken only with authorisation is part of the Convention.

64. **The Southern African Development Community (SADC)**

SADC was established in Windhoek in 1992 as the successor to the Southern African Development Coordination Conference (SADCC), which was founded in 1980. SADC currently counts 15 states among its members, namely Angola, Botswana, the Democratic Republic of Congo (DRC), Lesotho, Madagascar, Malawi, Mauritius, Mozambique, Namibia, the Seychelles, South Africa, Swaziland, Tanzania, Zambia, and Zimbabwe.

SADC’s objectives include the achievement of development and economic growth, the alleviation of poverty, the enhancement of the standard and quality of life, support of the socially disadvantaged through regional integration, the evolution of common political values, systems and institutions, the promotion and defence of peace and security, and achieving the sustainable utilisation of natural resources and effective protection of the environment. Amongst other issues, food security, land and agriculture as well as natural resources and the environment have been identified as areas of cooperation by the SADC Treaty.

SADC Protocols are instruments by means of which the SADC Treaty is implemented, and they have the same legal force as the Treaty itself. A Protocol legally binds its signatories after ratification. The Protocols which are of most relevance with regard to forestry are listed in below.

65. **SADC Protocol on Forestry, 2002** (entered into force within SADC on 1 September 2006)

Applies to all activities related to development, conservation, sustainable management and utilisation of all types of forests and trees, as well as trade in forest products. Article 4.1 provides the guiding principles to which state parties must cooperate in good faith. The protocol further provides for the tenure and ownership of state-owned forests, national forest policies and programmes for the introduction and implementation of national legal and administrative measures to promote sustainable forest management.

This Protocol aims to establish within the framework of the respective national laws of each State Party, common approaches to the conservation and sustainable use of wildlife resources and to assist with the effective enforcement of laws governing those resources. Each State Party has to ensure the conservation and sustainable use of wildlife resources under its jurisdiction, and that activities within its jurisdiction or control do not cause damage to the wildlife resources of other states or in areas beyond the limits of national jurisdiction. In line with Article 4 of the Protocol, appropriate policy, administrative and legal measures have to be taken to ensure the conservation and sustainable use of wildlife and to enforce national legislation pertaining to wildlife effectively.

**D. LOCAL STANDARDS AND BEST OPERATING PRACTICES**

See P170 for list of important alien invasive species.

Annex B: Training requirements for workers.

Workers* shall* be able to:

1. Implement forest* activities to comply with applicable legal* requirements (Criterion* 1.4.);
2. Understand what is unauthorized or illegal resource use and other illegal activities e.g. corruption (Criterion 1.4 & 1.7).
3. Understand the content, meaning and applicability of the eight ILO Core Labour Conventions (Criterion* 2.1, 2.3);
4. Promote gender equality* and prevent gender discrimination in employment practices, training opportunities, awarding of contracts, processes of engagement* and management activities (Criterion* 2.2);
5. Recognize and report on instances of sexual harassment and gender discrimination (Criterion* 2.2);
6. Know how to take precautionary measures to avoid malaria, heatstroke, dehydration and other occupational diseases (Criterion* 2.3);
7. Safely handle and dispose of hazardous substances to ensure that use does not pose health risks* (Criterion* 2.3);
8. Carry out their responsibilities for particularly dangerous jobs or jobs entailing a special responsibility (Criterion* 2.5);
9. Carry out safe wood chopping procedures (Criterion* 2.5.1);
10. Identify where Indigenous Peoples* have legal* and customary rights* related to management activities (Criterion* 3.2);
11. Identify and implement applicable elements of UNDRIP and ILO Convention 169 (Criterion* 3.4);
12. Identify sites which are of significance to Indigenous Peoples and the local communities and know actions and measures required to protect them (Criterion 3.5, 4.7)
13. Identify where local communities* have legal* and customary rights* related to management activities (Criterion* 4.2);
14. Carry out social, economic and environmental impact assessments* and develop appropriate mitigation measures (Criterion* 4.5, 6.3);
15. Handle, apply and store pesticides* (Criterion* 10.7); and

Annex C: Protective clothing and health and safety measures

The SDG conducted a Risk Assessment on the environmental and safety conditions which workers* are exposed to:

Based on the above, along with the intense climatic conditions in Namibia (heat), the following PPE shall be provided to all workers* on FSC certified FMUs. Note – the average height of invasive tree species in Namibia is approximately 4.5 meters in height.

1. The following protective equipment for field work MUST be worn at all times:
   a. Gumboots to aid against snake bites, thorny bush and summer rainwater and/or safety boots and/or canvas boot against snake bites, thorny bush and heat replaced as practically required.
   b. Hat or caps for protection against sun

2. The following protective equipment for field work MUST be provided but the workers may choose not to wear them all the time:
   a. Overalls, to be replaced annually
   b. Leather/cotton gloves replaced every 6 months

3. The following protective equipment for sifting, bagging and loading of charcoal MUST be worn at all times:
   a. Dust masks

4. The following protective equipment for sifting, bagging and loading of charcoal MUST be provided, but the workers may choose not to wear them all the time:
   a. Overalls, to be replaced annually
   b. Hat or caps for protection against sun
   c. Leather/cotton gloves replaced every 6 months
5. The following protective equipment for Chemical operations:
   Consult the Chemical Label to ensure compliance
   
   a. Overalls which are impermeable to the chemical
   b. Eye protection
   c. Gloves
   d. Gum boots
   e. Respiratory mask, where required by the Chemical Label

6. Every Forest Management Unit MUST have the following First Aid provisions:
   
   a. One certificated trained first aider with an adequately equipped First Aid kit
   b. First aid kit must include, but not be limited to:
      
      i. Bandages
      ii. Burn shield
      iii. Antiseptic
      iv. Emergency blanket

Annex D: Minimum Housing Requirements
The following housing standards have been developed which exceed those stipulated in the Namibian Labour legislation and adopt ILO requirements where appropriate.

1. Traditional and/or corrugated housing and/or tents*
2. Structurally safe, not overcrowded and regularly repaired, with sufficient ventilation.
3. Adequate protection against sun, rain and cold.
4. Not erected in potentially flooded areas or water runoffs.
5. 200 m away from charcoal processing related dust.
6. One clean, well ventilated, flush or long drop toilet separated for male and female for every 10 people.
7. One shower for every 10 - 15 people, separated for male and females, or private traditional washing facilities.
8. Potable water (tested for human consumption every 3 – 5 years) within 50 metres of dwellings
9. Houses are regularly inspected for hygiene and to prevent vermin
10. In field, during harvesting, accommodation: waterproof tents, long drop toilets or portable toilets and potable water tanks regularly filled up.
11. Rubbish bins or garbage bags must be present near workers housing.
12. Regular garbage collection and disposal at recognized fenced-off landfill sites regularly burned and/or adequately covered over with soil.
13. The evacuation of all sick workers and their dependants as the ILO deems owner is responsible for all personal on his premises.

Tents* - Tents may be utilised as housing for workers who are harvesting/processing biomass at a lengthy distance from a permanent structure. Black coloured tents shall not be utilised due to heat retention. The tents shall have a firm structure to protect the worker from the climatic elements.

1) The results of assessments, including:
   i. Natural resources and environmental values*, as identified in Principle* 6 and Principle* 9;
   ii. Social, economic and cultural resources and condition, as identified in Principle* 6, Principle* 2 to Principle*5 and Principle*9; and
   iii. Major social and environmental risks in the area, as identified in Principle* 6, Principle* 2 to Principle*5 and Principle*9;

2) Programs and activities regarding:
   i. Workers’* rights, occupational health and safety, gender equality*, as identified in Principle* 2;
   ii. Indigenous Peoples*, community relations, local economic and social development, as identified in Principle* 3, Principle* 4 and Principle* 5;
   iii. Stakeholder engagement* and the resolution of disputes and grievances, as identified in Principle* 1, Principle* 2 and Principle* 7;
   iv. Planned management activities and timeliness*, silvicultural systems* used, typical harvesting methods and equipment, as identified in Principle* 10; and
   v. The rationale for harvesting rates of timber and other natural resources, as identified in Principle* 5.

3) Measures to conserve* and/or restore*:
   i. Rare and threatened species* and habitats*;
   ii. Water bodies*, riparian zones*, and ephemeral water courses*;
   iii. Landscape* connectivity*, including wildlife corridors;
   iv. Sensitive* eco-systems* and/or Areas*, as identified in Principle* 6; and

4) Measures to assess, prevent, and mitigate negative impacts of management activities on:
   i. Environmental values*, as identified in Principle* 6 and Principle* 9; and

5) A description of the monitoring program, as identified in Principle* 8, including:
   i. Growth and yield, as identified in Principle* 5;
   ii. Environmental values*, as identified in Principle*6;
   iii. Operational impacts, as identified in Principle* 10:
   iv. High conservation values*, as identified in Principle* 9;
   v. Monitoring systems based on stakeholder engagement* planned or in place, as identified in Principle* 2 to Principle* 5 and Principle* 7; and
   vi. Maps describing the natural resources and land use zoning on the Management Unit*.
Annex F: Monitoring Requirements

1) Monitoring in 8.2.1 is sufficient to identify and describe the environmental impacts of management activities, including where applicable:

1. The results of regeneration activities – i.e. % regrowth (coppice/seedlings), age & growth rates (Criterion* 10.1);
2. Invasiveness or other adverse impacts associated with any alien species* within and outside the Management Unit* (Criterion* 10.3);
3. The results of silvicultural activities – i.e. changes in tree densities/circumference & height classes, harvesting quantities, (Criterion* 10.5);
4. Adverse impacts to environmental values* from fertilizers* (Criterion* 10.6);
5. Adverse impacts from the use of pesticides* (Criterion* 10.7);
6. The impacts from natural hazards* (Criterion* 10.9);
7. The impacts of infrastructural development, transport activities and silviculture to rare and threatened species*, habitats*, ecosystems*, landscape values*, water and soils (Criterion* 10.10);
8. The impacts of harvesting and extraction of timber on non-timber forest products*, environmental values*, merchantable wood waste and other products and services (Criterion* 10.11); and

2) Monitoring in 8.2.1 is sufficient to identify and describe social impacts of management activities, including where applicable:

1. Evidence of illegal or unauthorized activities (Criterion* 1.4);
2. Compliance with applicable laws*, local laws*, ratified* international conventions and obligatory codes of practice* (Criterion* 1.5);
3. Resolution of disputes* and grievances (Criterion* 1.6, Criterion* 2.6, Criterion* 4.6);
4. Programs and activities regarding workers’ rights – i.e.
   - Employment conditions;
   - Child labour;
   - Freedom of association; and
   - Proper housing (Criterion* 2.1);
5. Gender equality*, sexual harassment and gender discrimination (Criterion* 2.2);
6. Programs and activities regarding occupational health and safety (Criterion* 2.3);
7. Payment of wages to be fair and timely (Criterion* 2.4);
8. Workers’* training (Criterion* 2.5);
9. Where pesticides* are used, the health of workers* exposed to pesticides* (Criterion* 2.5 and Criterion* 10.7);
10. The identification of Indigenous Peoples* and local communities* and their legal* and customary rights* (Criterion* 3.1 and Criterion* 4.1);
11. Full implementation of the terms in binding agreements* (Criterion* 3.2 and Criterion* 4.2);
12. Indigenous Peoples* and community relations (Criterion* 3.2, Criterion* 3.3 and Criterion* 4.2);
13. Protection* of sites of special cultural, ecological, economic, religious or spiritual significance to Indigenous Peoples* and local communities* (Criterion* 3.5 and Criterion* 4.7);
14. The use of traditional knowledge* and intellectual property* (Criterion* 3.6 and Criterion* 4.8);
15. Local economic and social development (Criterion* 4.2, Criterion* 4.3, Criterion* 4.4, Criterion* 4.5);
16. The production of diversified benefits and/or products (Criterion* 5.1);
17. Actual compared to projected annual harvests of timber and non-timber forest products* (Criterion* 5.2);
18. The use of local processing, local services and local value added manufacturing (Criterion* 5.4);
19. Long term* economic viability* (Criterion* 5.5); and

3) Monitoring procedures in 8.2.2 are sufficient to identify and describe changes in environmental conditions including where applicable:

1. Environmental values* and ecosystem functions* (Criterion* 6.1); including the effectiveness of actions identified and implemented to prevent, mitigate and repair negative impacts to environmental values* (Criterion* 6.3);
2. Rare and threatened species*, and the effectiveness of actions implemented to protect them and their habitats*(Criterion* 6.4);
3. Important ecosystems and the effectiveness of actions implemented to conserve* and/or restore* them (Criterion* 6.5);
4. Naturally occurring native species* and biological diversity* and the effectiveness of actions implemented to conserve* and/or restore* them (Criterion* 6.6);
5. Water courses, water bodies*, water quantity and water quality and the effectiveness of actions implemented to conserve* and/or restore* them (Criterion* 6.7);
6. Landscape values* and the effectiveness of actions implemented to maintain and/or restore* them (Criterion* 6.8);
7. Conversion of natural forest* to non-forest* (Criterion* 6.9);
8. The status of converted areas); and
9. High Conservation Values* 1 to 4 identified in Criterion* 9.1 and the effectiveness of actions implemented to maintain and/or enhance them.
Annex G: HCV Framework

1. Identify (9.1.1) & consult (9.1.2) with relevant stakeholders on HCV’s potentially occurring on/close to FMU.
2. This consultation should include: potential threats (9.2.1) to the HCV & develop management strategies & actions (9.2.2) to maintain & enhance HCV’s.
3. The frequency of consultation depends on the changes to HCV’s (every 5yrs).

HCV Consultation

Annex J: List of rare and threatened species in the country

IUCN Red List

9. FSC Glossary of Terms

This glossary includes internationally accepted definitions whenever possible. These sources include, for instance, the Food and Agriculture Organization of the United Nations (FAO), the Convention on Biological Diversity (1992), the Millennium Ecosystem Assessment (2005) as well as definitions from online glossaries as provided on the websites of the World Conservation Union (IUCN), the International Labour Organization (ILO) and the Invasive Alien Species Programme of the Convention on Biological Diversity. When other sources have been used they are referenced accordingly.

The term ‘based on’ means that a definition was adapted from an existing definition as provided in an international source.

Words used in the International Generic Indicators, if not defined in this Glossary of Terms or other normative FSC documents, are used as defined in the Shorter Oxford English Dictionary or the Concise Oxford Dictionary.

Adaptive management: A systematic process of continually improving management policies and practices by learning from the outcomes of existing measures (Source: Based on World Conservation Union (IUCN). Glossary definitions as provided on IUCN website).

Affected stakeholder: Any person, group of persons or entity that is or is likely to be subject to the effects of the activities of a Management Unit. Examples include, but are not restricted to (for example in the case of downstream landowners), persons, groups of persons or entities located in the neighborhood of the Management Unit. The following are examples of affected stakeholders:
- Local communities
- Indigenous Peoples
- Workers
- Forest dwellers
- Neighbors
- Downstream landowners
- Local processors
- Local businesses
- Tenure and use rights holders, including landowners
- Organizations authorized or known to act on behalf of affected stakeholders, for example social and environmental NGOs, labor unions, etc.

Alien species: A species, subspecies or lower taxon, introduced outside its natural past or present distribution; includes any part, gametes, seeds, eggs, or propagules of such species that might survive and subsequently reproduce (Source: Convention on Biological Diversity (CBD), Invasive Alien Species Programme. Glossary of Terms as provided on CBD website).

Applicable law: Means applicable to The Organization as a legal person or business enterprise in or for the benefit of the Management Unit and those laws which affect the implementation of the FSC Principles and Criteria. This includes any combination of statutory law (Parliamentary-approved) and case law (court interpretations), subsidiary regulations, associated administrative procedures, and the national constitution (if present) which invariably takes legal precedence over all other legal instruments (Source: FSC-STD-01-001 V5-0).

Aquifer: A formation, group of formations, or part of a formation that contains sufficient saturated permeable material to yield significant quantities of water to wells and springs for that unit to have economic value as a source of water in that region. (Source: Gratzfeld, J. 2003. Extractive Industries in Arid and Semi-Arid Zones.
World Conservation Union (IUCN)).

**Best Available Information:** Data, facts, documents, expert opinions, and results of field surveys or consultations with stakeholders that are most credible, accurate, complete, and/or pertinent and that can be obtained through reasonable* effort and cost, subject to the scale* and intensity* of the management activities and the Precautionary Approach*.

**Binding Agreement:** A deal or pact, written or not, which is compulsory to its signatories and enforceable by law. Parties involved in the agreement do so freely and accept it voluntarily.

**Biological diversity:** The variability among living organisms from all sources including, inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are a part; this includes diversity within species, between species and of ecosystems (Source: Convention on Biological Diversity 1992, Article 2).

**Biological control agents:** Organisms used to eliminate or regulate the population of other organisms (Source: Based on FSC-STD-01-001 V4-0 and World Conservation Union (IUCN). Glossary definitions as provided on IUCN website).

**Bush thickening (encroachment):** Bush encroachment is defined as “the invasion and/or thickening of aggressive undesired woody species resulting in an imbalance of the grass:bush ratio, a decrease in biodiversity, and a decrease in carrying capacity”, causing severe economic losses for Namibia – in both the commercial (freehold) and communal (non-freehold) farming areas.

**Communal land** means any geographic area of land habitually inhabited by traditional communities (Source: Nature Conservation Amendment Act 5 of 1996; Confidential information: Private facts, data and content that, if made publicly available, might put at risk The Organization*, its business interests or its relationships with stakeholders, clients and competitors.

**Conflicts between the Principles and Criteria and laws:** Situations where it is not possible to comply with the Principles and Criteria and a law at the same time (Source: FSC-STD-01-001 V5-0).

**Connectivity:** A measure of how connected or spatially continuous a corridor, network, or matrix is. The fewer gaps, the higher the connectivity. Related to the structural connectivity concept; functional or behavioral connectivity refers to how connected an area is for a process, such as an animal moving through different types of landscape elements. Aquatic connectivity deals with the accessibility and transport of materials and organisms, through groundwater and surface water, between different patches of aquatic ecosystems of all kinds. (Source: Based on R.T.T. Forman. 1995. Land Mosaics. The Ecology of Landscapes and Regions. Cambridge University Press, 632pp).

**Conservancy:** A group of persons residing on communal land who have had the area which they inhabit, or any part thereof, declared a conservancy and gazetted as such by Government (Source: Nature Conservation Amendment Act 5 of 1996).

**Conservation/Protection:** These words are used interchangeably when referring to management activities designed to maintain the identified environmental or cultural values in existence long-term. Management activities may range from zero or minimal interventions to a specified range of appropriate interventions and activities designed to maintain, or compatible with maintaining, these identified values (Source: FSC-STD-01-001 V5-0).

**Conservation Areas Network:** Those portions of the Management Unit* for which conservation is the primary and, in some circumstances, exclusive objective; such areas include representative sample areas*, conservation zones*, protection areas*, connectivity* areas and High Conservation Value Areas*.

**Conservation zones and protection areas:** Defined areas that are designated and managed primarily to safeguard species, habitats, ecosystems, natural features or other site-specific values because of their natural environmental or cultural values, or for purposes of monitoring, evaluation or research, not necessarily excluding other management activities. For the purposes of the Principles and Criteria, these terms are used interchangeably, without implying that one always has a higher degree of conservation or protection than the other. The
term ‘protected area’ is not used for these areas, because this term implies *legal* or official status, covered by national regulations in many countries. In the context of the Principles and Criteria, management of these areas should involve active conservation, not passive protection* (Source: FSC-STD-01-001 V5-0).

**Critical:** The concept of criticality or fundamentality in Principal 9 and HCVs relates to irreplaceability and to cases where loss or major damage to this HCV would cause serious prejudice or suffering to affected stakeholders. An ecosystem service is considered to be critical (HCV 4) where a disruption of that service is likely to cause, or poses a threat of, severe negative impacts on the welfare, health or survival of local communities, on the environment, on HCVs, or on the functioning of significant infrastructure (roads, dams, buildings etc.). The notion of criticality here refers to the importance and risk for natural resources and environmental and socio-economic values (Source: FSC-STD-01-001 V5-0).

**Criterion** (pl. Criteria): A means of judging whether or not a Principle (of forest stewardship) has been fulfilled (Source: FSC-STD-01-001 V4-0).

**Culturally appropriate[mechanisms]:** Means/approaches for outreach to target groups that are in harmony with the customs, values, sensitivities, and ways of life of the target audience.

**Customary law:** Interrelated sets of customary rights may be recognized as customary law. In some jurisdictions, customary law is equivalent to statutory law, within its defined area of competence and may replace the statutory law for defined ethnic or other social groups. In some jurisdictions customary law complements statutory law and is applied in specified circumstances (Source: Based on N.L. Peluso and P. Vandergeest. 2001. Genealogies of the political forest and customary rights in Indonesia, Malaysia and Thailand, Journal of Asian Studies 60(3):761–812).

**Customary rights:** Rights which result from a long series of habitual or customary actions, constantly repeated, which have, by such repetition and by uninterrupted acquiescence, acquired the force of a law within a geographical or sociological unit (Source: FSC-STD-01-001 V4-0).

**Dispute:** for the purpose of the IGI, this is an expression of dissatisfaction by any person or organization presented as a complaint to *The Organization*, relating to its management activities or its conformity with the FSC Principles and Criteria, where a response is expected (Source: based on FSC-PRO-01-005 V3-0 Processing Appeals).

**Dispute of substantial duration:** *Dispute* that continues for more than twice as long as the predefined timelines in the FSC System (this is, for more than 6 months after receiving the complaint, based on FSC-STD-20-001).

**Dispute of substantial magnitude:** For the purpose of the International Generic Indicators, a *dispute* of substantial magnitude is a *dispute* that involves one or more of the following:

- Affects the *legal* or *customary rights* of *Indigenous Peoples* and *local communities*;
- Where the negative impact of management activities is of such a scale that it cannot be reversed or mitigated;
- Physical violence;
- Destruction of property;
- Presence of military bodies;
- Acts of intimidation against *forest* workers and *stakeholders*.

This list should be adapted or expanded by Standard Developers.

**Ecological integrity:** A measure of how intact or complete an ecosystem is.

**Economic viability:** The capability of developing and surviving as a relatively independent social, economic or political unit. Economic viability may require but is not synonymous with profitability (Source: Based on the definition provided on the website of the European Environment Agency).

**Ecosystem:** A dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit (Source: Convention on Biological Diversity 1992, Article 2).
**Ecosystem function**: An intrinsic ecosystem characteristic related to the set of conditions and processes whereby an ecosystem maintains its integrity (such as primary productivity, food chain, biogeochemical cycles). Ecosystem functions include such processes as decomposition, production, nutrient cycling, and fluxes of nutrients and energy. For FSC purposes, this definition includes ecological and evolutionary processes such as gene flow and disturbance regimes, regeneration cycles and ecological seral development (succession) stages. (Source: Based on R. Hassan, R. Scholes and N. Ash. 2005. Ecosystems and Human Well-being: Synthesis. The Millennium Ecosystem Assessment Series. Island Press, Washington DC; and R.F. Noss. 1990. Indicators for monitoring biodiversity: a hierarchical approach. Conservation Biology 4(4):355–364).

**Ecosystem services**: The benefits people obtain from ecosystems. These include:
- provisioning services such as food, forest products and water;
- regulating services such as regulation of floods, drought, land degradation, air quality, climate and disease;
- supporting services such as soil formation and nutrient cycling; and
- cultural services and cultural values such as recreational, spiritual, religious and other non-material benefits.

**Engaging / engagement**: The process by which The Organization communicates, consults and/or provides for the participation of interested and/or affected stakeholders ensuring that their concerns, desires, expectations, needs, rights and opportunities are considered in the establishment, implementation and updating of the management plan* (Source: FSC-STD-01-001 V5-0).

**Environmental Impact Assessment (EIA)**: Systematic process used to identify potential environmental and social impacts of proposed projects, to evaluate alternative approaches, and to design and incorporate appropriate prevention, mitigation, management and monitoring measures (Source: based on Environmental impact assessment, guidelines for FAO field projects. Food and agriculture organization of the United Nations (FAO). Rome,-STD-01-001 V5-0).

**Environmental values**: The following set of elements of the biophysical and human environment:
- ecosystem functions (including carbon sequestration and storage);
- biological diversity;
- water resources;
- soils;
- atmosphere;
- landscape values (including cultural and spiritual values).

The actual worth attributed to these elements depends on human and societal perceptions (Source: FSC-STD-01-001 V5-0).

**Ephemeral water course/ Ephemeral flowpath/ Ephemeral waterway**: An ephemeral flowpath/ waterway or watercourse is where any one of the following criteria are met: (a) The flow path is an entrenched dry gully. (b) There is clear evidence of a channel within the valley system where overland flow occurs from time to time. (c) There is clear evidence of erosion (such as gulling or headward gully erosion) associated with short term water flow from time to time within the valley system.

**Externalities**: The positive and negative impacts of activities on stakeholders that are not directly involved in those activities, or on a natural resource or the environment, which do not usually enter standard cost accounting systems, such that the market prices of the products of those activities do not reflect the full costs or benefits (Source: FSC-STD-01-001 V5-0).

**Fair compensation**: Remuneration that is proportionate to the magnitude and type of services rendered by another party or of the harm that is attributable to the first party.

**Family forestry**: Smallholder forestry where there is no formal employment. The great majority of work is done
by family members.

**Fertilizer**: Mineral or organic substances, most commonly N, P2O5 and K2O, which are applied to soil for the purpose of enhancing plant growth.

**Focal species**: Species whose requirements for persistence define the attributes that must be present if that landscape is to meet the requirements of the species that occur there (Source: Lambeck, R., J. 1997. Focal Species: A multi-species Umbrella for Nature Conservation. Conservation Biology vol 11 (4): 849-856.).

**Fodder species**: Forest: A tract of land dominated by trees (Source: FSC-STD-01-001 V5-0. Derived from FSC Guidelines for Certification Bodies, Scope of Forest Certification, Section 2.1 first published in 1998, and revised as FSC-GUI-20-200 in 2005, and revised again in 2010 as FSC-DIR-20-007 FSC Directive on Forest Management Evaluations, ADVICE-20-007-01). In Namibia, Forests are defined as 'natural forests*', as protected by law. Forest belong to the State. It includes classified forests; community forests; forest reserve; regional forest reserve; state forest reserve (Forest Act, No 12 of 2001 and its Regulations of 2015).

**Formal and informal workers organization**: association or union of workers*, whether recognized by law or by The Organization* or neither, which have the aim of promoting workers* rights and to represent workers* in dealings with The Organization* particularly regarding working conditions and compensation.

**Free, Prior, and Informed Consent (FPIC)**: A legal* condition whereby a person or community can be said to have given consent to an action prior to its commencement, based upon a clear appreciation and understanding of the facts, implications and future consequences of that action, and the possession of all relevant facts at the time when consent is given. Free, prior and informed consent includes the right to grant, modify, withhold or withdraw approval (Source: Based on the Preliminary working paper on the principle of Free, Prior and Informed Consent of Indigenous Peoples (…) (E/CN.4/Sub.2/AC.4/2004/4 8 July 2004) of the 22nd Session of the United Nations Commission on Human Rights, Sub-committee on the Promotion and Protection of Human Rights, Working Group on Indigenous Populations, 19–23 July 2004).

**Gender equality**: Gender equality or gender equity means that women and men have equal conditions for realizing their full human rights and for contributing to, and benefiting from, economic, social, cultural and political development (Source: Adapted from FAO, IFAD and ILO workshop on ‘Gaps, trends and current research in gender dimensions of agricultural and rural employment: differentiated pathways out of poverty’, Rome, 31 March to 2 April 2009.).

**Genetically modified organism**: An organism in which the genetic material has been altered in a way that does not occur naturally by mating and/or natural recombination. (Source: Based on FSC-POL-30-602 FSC Interpretation on GMO (Genetically Modified Organisms)).

**Genotype**: The genetic constitution of an organism (Source: FSC-STD-01-001 V5-0).

**Grassland**: Land covered with herbaceous plants with less than 10% tree and shrub cover (Source: UNEP, cited in FAO. 2002. Second Expert Meeting on Harmonizing Forest-Related Definitions for use by various stakeholders).

**Habitat**: The place or type of site where an organism or population occurs (Source: Based on the Convention on Biological Diversity, Article 2).

**Habitat features**: Forest* stand attributes and structures, including but not limited to:

- Trees with special ecological value;
- Vertical and horizontal complexity;
- Standing dead trees;
- Dead fallen wood;
- Patches of open area attributable to natural disturbances;
- Nesting sites;
- Small wetlands, pans, omaramba, ephemeral drainage lines;
- Ponds;
Areas for procreation;
- Areas for feeding and shelter, including seasonal cycles of breeding;
- Areas for migration;
- Areas for hibernation.

**High Conservation Value (HCV):** Any of the following values:

- **HCV1:** Species Diversity. Concentrations of *biological diversity* including endemic species, and rare, *threatened or endangered* species, that are significant at global, regional or national levels.
- **HCV2:** Landscape-level ecosystems and mosaics. Intact Forest Landscapes, large landscape-level *ecosystems* and ecosystem mosaics that are significant at global, regional or national levels, and that contain viable populations of the great majority of the naturally occurring species in natural patterns of distribution and abundance.
- **HCV3:** Ecosystems and habitats. Rare, threatened, or endangered ecosystems, *habitats* or refugia*.
- **HCV4:** Critical ecosystem services. Basic *ecosystem services* in critical situations, including protection of water catchments and control of erosion of vulnerable soils and slopes.
- **HCV5:** Community needs. Sites and resources fundamental for satisfying the basic necessities of local communities or Indigenous Peoples* (for example for livelihoods, health, nutrition, water), identified through engagement with these communities or Indigenous Peoples*.
- **HCV6:** Cultural values. Sites, resources, habitats and landscapes* of global or national cultural, archaeological or historical significance, and/or of critical cultural, ecological, economic or religious/sacred importance for the traditional cultures of local communities or Indigenous Peoples*, identified through engagement with these local communities or Indigenous Peoples*.

(Source: based on FSC-STD-01-001 V5-0).

**High Conservation Value Areas:** Zones and physical spaces which possess and/or are needed for the existence and maintenance of identified *High Conservation Values*.

**High grading:** High grading is a tree removal practice in which only the best quality, most valuable timber trees are removed, often without regenerating new tree seedlings or removing the remaining poor quality and suppressed understory trees and, in doing so, degrading the ecological health and commercial value of the forest. High grading stands as a counterpoint to sustainable resource management (Source: based on Glossary of Forest Management Terms. North Carolina Division of Forest Resources. March 2009).

**Indicator:** A quantitative or qualitative variable which can be measured or described, and which provides a means of judging whether a *Management Unit* complies with the requirements of an FSC Criterion. Indicators and the associated thresholds thereby define the requirements for responsible forest management at the level of the *Management Unit* and are the primary basis of forest evaluation (Source: FSC-STD-01-002 V1-0 FSC Glossary of Terms (2009)).

**Indigenous Peoples:** People and groups of people that can be identified or characterized as follows:

- The key characteristic or Criterion is self-identification as Indigenous Peoples at the individual level and acceptance by the community as their member;
- Historical continuity with pre-colonial and/or pre-settler societies;
- Strong link to territories and surrounding natural resources;
- Distinct social, economic or political systems;
- Distinct language, culture and beliefs;
- Form non-dominant groups of society;
- Resolve to maintain and reproduce their ancestral environments and systems as distinctive peoples and communities.

Infrastructure: In the context of forest management, roads, bridges, culverts, log landings, quarries, impoundments, buildings and other structures required in the course of implementing the management plan*.

Intact Forest Landscape: a territory within today’s global extent of forest cover which contains forest and non-forest ecosystems minimally influenced by human economic activity, with an area of at least 500 km² (50,000 ha) and a minimal width of 10 km (measured as the diameter of a circle that is entirely inscribed within the boundaries of the territory) (Source: Intact Forests / Global Forest Watch. Glossary definition as provided on Intact Forest website. 2006-2014).

Intellectual property: Practices as well as knowledge, innovations and other creations of the mind (Source: Based on the Convention on Biological Diversity, Article 8(j); and World Intellectual Property Organization. What is Intellectual Property? WIPO Publication No. 450(E)).

Intensity: A measure of the force, severity or strength of a management activity or other occurrence affecting the nature of the activity’s impacts (Source: FSC-STD-01-001 V5-0).

Interested stakeholder: Any person, group of persons, or entity that has shown an interest, or is known to have an interest, in the activities of a Management Unit. The following are examples of interested stakeholders.

- Conservation organizations, for example environmental NGOs;
- Labor (rights) organizations, for example labor unions;
- Human rights organizations, for example social NGOs;
- Local development projects;
- Local governments;
- National government departments functioning in the region;
- FSC National Offices;
- Experts on particular issues, for example High Conservation Values.

(Internationally accepted scientific protocol: A predefined science-based procedure which is either published by an international scientific network or union, or referenced frequently in the international scientific literature (Source: FSC-STD-01-001 V5-0).

Invasive species: Species that are rapidly expanding outside of their native range. Invasive species can alter ecological relationships among native species and can affect ecosystem function and human health (Source: Based on World Conservation Union (IUCN). Glossary definitions as provided on IUCN website).

Lands and territories: For the purposes of the Principles and Criteria these are lands or territories that Indigenous Peoples or local communities have traditionally owned, or customarily used or occupied, and where access to natural resources is vital to the sustainability of their cultures and livelihoods (Source: Based on World Bank safeguard OP 4.10 Indigenous Peoples, section 16 (a). July 2005.).

Landscape: A geographical mosaic composed of interacting ecosystems resulting from the influence of geological, topographical, soil, climatic, biotic and human interactions in a given area (Source: Based on World Conservation Union (IUCN). Glossary definitions as provided on IUCN website).

Landscape values: Landscape values can be visualized as layers of human perceptions overlaid on the physical landscape. Some landscape values, like economic, recreation, subsistence value or visual quality are closely related to physical landscape attributes. Other landscape values such as intrinsic or spiritual value are more symbolic in character and are influenced more by individual perception or social construction than physical landscape attributes (Source: Based on website of the Landscape Value Institute).

Legal: In accordance with primary legislation (national or local laws) or secondary legislation (subsidiary regulations, decrees, orders, etc.). ‘Legal’ also includes rule-based decisions made by legally competent agencies where such decisions flow directly and logically from the laws and regulations. Decisions made by legally competent agencies may not be legal if they do not flow directly and logically from the laws and regulations and if they are not rule-based but use administrative discretion (Source: FSC-STD-01-001 V5-0).

Legally competent: Mandated in law to perform a certain function (Source: FSC-STD-01-001 V5-0).
Legal registration: National or local legal license or set of permissions to operate as an enterprise, with rights to buy and sell products and/or services commercially. The license or permissions can apply to an individual, a privately-owned enterprise or a publicly-owned corporate entity. The rights to buy and sell products and/or services do not carry the obligation to do so, so legal registration applies also to Organizations operating a Management Unit without sales of products or services; for example, for unpriced recreation or for conservation of biodiversity or habitat (Source: FSC-STD-01-001 V5-0).

Legal status: The way in which the Management Unit is classified according to law. In terms of tenure, it means the category of tenure, such as communal land or leasehold or freehold or State land or government land, etc. If the Management Unit is being converted from one category to another (for example, from State land to communal indigenous land) the status includes the current position in the transition process. In terms of administration, legal status could mean that the land is owned by the nation as a whole, is administered on behalf of the nation by a government department, and is leased by a government Ministry to a private sector operator through a concession (Source: FSC-STD-01-001 V5-0).

Living wage: The remuneration received for a standard work week by a worker in a particular place sufficient to afford a decent standard of living for the worker and her or his family. Elements of a decent standard of living include food, water, housing, education, health care, transport, clothing, and other essential needs including provision for unexpected events (Source: A Shared Approach to a Living Wage. ISEAL Living Wage Group. November 2013).

Local communities: Communities of any size that are in or adjacent to the Management Unit, and also those that are close enough to have a significant impact on the economy or the environmental values of the Management Unit or to have their economies, rights or environments significantly affected by the management activities or the biophysical aspects of the Management Unit (Source: FSC-STD-01-001 V5-0).

Local laws: The whole suite of primary and secondary laws (acts, ordinances, statutes, decrees) which is limited in application to a particular geographic district within a national territory, as well as secondary regulations, and tertiary administrative procedures (rules / requirements) that derive their authority directly and explicitly from these primary and secondary laws. Laws derive authority ultimately from the Westphalian concept of sovereignty of the Nation State (Source: FSC-STD-01-001 V5-0).

Long-term: The time-scale of the forest owner or manager as manifested by the objectives of the management plan, the rate of harvesting, and the commitment to maintain permanent forest cover. The length of time involved will vary according to the context and ecological conditions, and will be a function of how long it takes a given ecosystem to recover its natural structure and composition following harvesting or disturbance, or to produce mature or primary conditions (Source: FSC-STD-01-002 V1-0 FSC Glossary of Terms (2009)).

Management objective: Specific management goals, practices, outcomes, and approaches established to achieve the requirements of this standard.

Management plan: The collection of documents, reports, records and maps that describe, justify and regulate the activities carried out by any manager, staff or organization within or in relation to the Management Unit, including statements of objectives and policies (Source: FSC-STD-01-001 V5-0).

Management plan monitoring: Follow up and oversight procedures for the purpose of evaluating the achievement of the management objectives. The results of the monitoring activities are utilized in the implementation of adaptive management.

Management Unit: A spatial area or areas submitted for FSC certification with clearly defined boundaries managed to a set of explicit long term management objectives which are expressed in a management plan. This area or areas include(s):

- all facilities and area(s) within or adjacent to this spatial area or areas under legal title or management control of, or operated by or on behalf of The Organization, for the purpose of contributing to the management objectives; and
all facilities and area(s) outside, and not adjacent to this spatial area or areas and operated by or on behalf of *The Organization*, solely for the purpose of contributing to the management objectives. (Source: FSC-STD-01-001 V5-0).

**Managerial control:** Responsibility of the kind defined for corporate directors of commercial enterprises in national commercial law, and treated by FSC as applicable also to public sector organizations (Source: FSC-STD-01-001 V5-0).

**Mosaic:** Mosaic harvesting (patch harvesting) is favoured above block/strip harvesting as it increases the ecoregion area (edge effect) and supports higher biodiversity.

**National laws:** The whole suite of primary and secondary laws (acts, ordinances, statutes, decrees), which is applicable to a national territory, as well as secondary regulations, and tertiary administrative procedures (rules / requirements) that derive their authority directly and explicitly from these primary and secondary laws (Source: FSC-STD-01-001 V5-0).

**Native species:** Species, subspecies, or lower taxon, occurring within its natural range (past or present) and dispersal potential (that is, within the range it occupies naturally or could occupy without direct or indirect introduction or care by humans) (Source: Convention on Biological Diversity (CBD). Invasive Alien Species Programme. Glossary of Terms as provided on CBD website).

**Natural conditions/native ecosystem:** For the purposes of the Principles and Criteria and any applications of restoration techniques, terms such as ‘more natural conditions’, ‘native ecosystem’ provide for managing sites to favor or restore native species and associations of native species that are typical of the locality, and for managing these associations and other environmental values so that they form ecosystems typical of the locality. Further guidelines may be provided in FSC Forest Stewardship Standards (Source: FSC-STD-01-001 V5-0).

**Natural forest:** A forest area with many of the principal characteristics and key elements of native ecosystems, such as complexity, structure and biological diversity, including soil characteristics, flora and fauna, in which all or almost all the trees are native species, not classified as plantations.

‘Natural forest’ includes the following categories:

- Forest affected by harvesting or other disturbances, in which trees are being or have been regenerated by a combination of natural and artificial regeneration with species typical of natural forests in that site, and where many of the above-ground and below-ground characteristics of the natural forest are still present. In boreal and north temperate forests which are naturally composed of only one or few tree species, a combination of natural and artificial regeneration to regenerate forest of the same native species, with most of the principal characteristics and key elements of native ecosystems of that site, is not by itself considered as conversion to plantations;

- Natural forests which are maintained by traditional silvicultural practices including natural or assisted natural regeneration;

- Well-developed secondary or colonizing forest of native species which has regenerated in non-forest areas;

- The definition of ‘natural forest’ may include areas described as wooded ecosystems, woodland and savannah.

The description of natural forests and their principal characteristics and key elements may be further defined in FSC Forest Stewardship Standards, with appropriate descriptions or examples.

‘Natural forest’ does not include land which is not dominated by trees, was previously not forest, and which does not yet contain many of the characteristics and elements of native ecosystems. Young regeneration may be considered as natural forest after some years of ecological progression. FSC Forest Stewardship Standards may indicate when such areas may be excised from the Management Unit, should be restored towards more natural conditions, or may be converted to other land uses.

FSC has not developed quantitative thresholds between different categories of forests in terms of area, density,
height, etc. FSC Forest Stewardship Standards may provide such thresholds and other guidelines, with appropriate descriptions or examples. Pending such guidance, areas dominated by trees, mainly of native species, may be considered as natural forest.

Thresholds and guidelines may cover areas such as:

- Other vegetation types and non-forest communities and ecosystems included in the Management Unit, including grassland, bushland, wetlands, and open woodlands;
- Very young pioneer or colonizing regeneration in a primary succession on new open sites or abandoned farmland, which does not yet contain many of the principal characteristics and key elements of native ecosystems. This may be considered as natural forest through ecological progression after the passage of years;
- Young natural regeneration growing in natural forest areas may be considered as natural forest, even after logging, clear-felling or other disturbances, since many of the principal characteristics and key elements of native ecosystems remain, above-ground and below-ground;
- Areas where deforestation and forest degradation have been so severe that they are no longer ‘dominated by trees’ may be considered as non-forest, when they have very few of the principal above-ground and below-ground characteristics and key elements of natural forests. Such extreme degradation is typically the result of combinations of repeated and excessively heavy logging, grazing, farming, fuelwood collection, hunting, fire, erosion, mining, settlements, infrastructure, etc. FSC Forest Stewardship Standards may help to decide when such areas should be excised from the Management Unit, should be restored towards more natural conditions, or may be converted to other land uses.

(Source: FSC-STD-01-001 V5-0).

**Natural Hazards**: disturbances that can present risks to social and *environmental values* in the Management Unit* but that may also comprise important ecosystem functions; examples include drought, flood, fire, landslide, storm, avalanche, etc.

**Non-timber forest products (NTFP)**: All products other than timber derived from the Management Unit (Source: FSC-STD-01-001 V5-0).

**Obligatory code of practice**: A manual or handbook or other source of technical instruction which The Organization must implement by law (Source: FSC-STD-01-001 V5-0).

**Occupational accident**: An occurrence arising out of, or in the course of, work which results in fatal or non-fatal injury (Source: International Labour Organization (ILO). Bureau of Library and Information Services. ILO Thesaurus as provided on ILO website).

**Occupational disease**: Any disease contracted as a result of an exposure to risk factors arising from work activity (Source: International Labour Organization (ILO). Bureau of Library and Information Services. ILO Thesaurus as provided on ILO website).

**Occupational injuries**: Any personal injury, disease or death resulting from an occupational accident (Source: International Labour Organization (ILO). Bureau of Library and Information Services. ILO Thesaurus as provided on ILO website).

**Omaramba**: A river that only flows when there is heavy rainfall; it therefore also means a dry river bed.

**The Organization**: The person or entity holding or applying for certification and therefore responsible for demonstrating compliance with the requirements upon which FSC certification is based (Source: FSC-STD-01-
Pesticide: Any substance or preparation prepared or used in protecting plants or wood or other plant products from pests; in controlling pests; or in rendering such pests harmless. This definition includes insecticides, rodenticides, acaricides, molluscicides, larvaecides, fungicides and herbicides (Source: FSC-POL-30-001 FSC Pesticides Policy (2005)).

Plantation: A forest area established by planting or sowing with using either alien or native species, often with one or few species, regular spacing and even ages, and which lacks most of the principal characteristics and key elements of natural forests. The description of plantations may be further defined in FSC Forest Stewardship Standards, with appropriate descriptions or examples, such as:

- Areas which would initially have complied with this definition of ‘plantation’ but which, after the passage of years, contain many or most of the principal characteristics and key elements of native ecosystems, may be classified as natural forests.
- Plantations managed to restore and enhance biological and habitat diversity, structural complexity and ecosystem functionality may, after the passage of years, be classified as natural forests.
- Boreal and north temperate forests which are naturally composed of only one or few tree species, in which a combination of natural and artificial regeneration is used to regenerate forest of the same native species, with most of the principal characteristics and key elements of native ecosystems of that site, may be considered as natural forest, and this regeneration is not by itself considered as conversion to plantations.

(Source: FSC-STD-01-001 V5-0)

Precautionary approach: An approach requiring that when the available information indicates that management activities pose a threat of severe or irreversible damage to the environment or a threat to human welfare, The Organization* will take explicit and effective measures to prevent the damage and avoid the risks to welfare, even when the scientific information is incomplete or inconclusive, and when the vulnerability and sensitivity of environmental values are uncertain (Source: Based on Principle 15 of Rio Declaration on Environment and Development, 1992, and Wingspread Statement on the Precautionary Principle of the Wingspread Conference, 23–25 January 1998).

Pre-harvest[condition]: The diversity, composition, and structure of the forest* or plantation prior to felling timber and appurtenant activities such as road building.

Principle: An essential rule or element; in FSC’s case, of forest stewardship (Source: FSC-STD-01-001 V4-0).

Protection: See definition of Conservation.

Protection Area: See definition of Conservation Zone.

Publicly available: In a manner accessible to or observable by people generally (Source: Collins English Dictionary, 2003 Edition).

Rare species: Species that are uncommon or scarce, but not classified as threatened. These species are located in geographically restricted areas or specific habitats, or are scantily scattered on a large scale. They are approximately equivalent to the IUCN (2001) category of Near Threatened (NT), including species that are close to qualifying for, or are likely to qualify for, a threatened category in the near future. They are also approximately equivalent to imperiled species (Source: Based on IUCN. (2001). IUCN Red List Categories and Criteria: Version 3.1. IUCN Species Survival Commission. IUCN. Gland, Switzerland and Cambridge, UK).

Ratified: The process by which an international law, convention or agreement (including multilateral environmental agreement) is legally approved by a national legislature or equivalent legal* mechanism, such that the international law, convention or agreement becomes automatically part of national law or sets in motion the development of national law to give the same legal* effect (Source: FSC-STD-01-001 V5-0).

Reasonable: Judged to be fair or appropriate to the circumstances or purposes, based on general experience (Source: Shorter Oxford English Dictionary).

Reduced impact harvesting: Harvesting (or logging) using techniques to reduce the impact on the residual
stand (Source: Based on Guidelines for the Conservation and Sustainable Use of Biodiversity in Tropical Timber Production Forests, IUCN 2006).

**Refugia**: An isolated area where extensive changes, typically due to changing climate or by disturbances such as those caused by humans, have not occurred and where plants and animals typical of a region may survive (Source: Glen Canyon Dam, Adaptive Management Program Glossary as provided on website of Glen Canyon Dam website).

**Representative Sample Areas**: Portions of the Management Unit* delineated for the purpose of conserving or restoring viable examples of an ecosystem that would naturally occur in that geographical region.

**Resilience**: The ability of a system to maintain key functions and processes in the face of stresses or pressures by either resisting or adapting to change. Resilience can be applied to both ecological systems and social systems (Source: IUCN World Commission on Protected Areas (IUCN-WCPA). 2008. Establishing Marine Protected Area Networks – Making it Happen. Washington D.C.: IUCN-WCPA National Oceanic and Atmospheric Administration and The Nature Conservancy.).

**Restore / Restoration**: These words are used in different senses according to the context and in everyday speech. In some cases ‘restore’ means to repair the damage done to environmental values that resulted from management activities or other causes. In other cases ‘restore’ means the formation of more natural conditions in sites which have been heavily degraded or converted to other land uses. In the Principles and Criteria, the word ‘restore’ is not used to imply the recreation of any particular previous, pre-historic, pre-industrial or other pre-existing ecosystem (Source: FSC-STD-01-001 V5-0).

The Organization* is not necessarily obliged to restore those environmental values that have been affected by factors beyond the control of The Organization, for example by natural disasters, by climate change, or by the legally authorized activities of third parties, such as public infrastructure, mining, hunting or settlement. FSC-POL-20-003 The Excision of Areas from the Scope of Certification describes the processes by which such areas may be excised from the area certified, when appropriate.

The Organization is also not obliged to restore environmental values that may have existed at some time in the historic or pre-historic past, or that have been negatively affected by previous owners or organizations. However, The Organization is expected to take reasonable measures to mitigate, control and prevent environmental degradation which is continuing in the Management Unit as a result of such previous impacts.

**Riparian Habitat**: Riparian habitat includes the physical structure and associated vegetation of the areas associated with a watercourse which are commonly characterised by alluvial soils, and which are inundated or flooded to an extent and with a frequency sufficient to support vegetation of species with a composition and physical structure distinct from those of adjacent land areas. [National Water Act, (Act 36 of 1998)] Also referred to as riparian zone.

**Riparian zone**: Interface between land and a water body, and the vegetation associated with it.

**Risk**: The probability of an unacceptable negative impact arising from any activity in the Management Unit combined with its seriousness in terms of consequences (Source: FSC-STD-01-001 V5-0).

**Savanna Biome/ Savanna**: Savanna has developed in the more tropical regions of the country where the rainfall is seasonal, with a pronounced dry period in winter, and temperatures high. Upper strata of rather low trees, many of which provide useful browse, scattered in grass-dominated undergrowth. Tree densities vary greatly, from conditions approaching forest at one extreme to almost open grassland at the other. Most of the trees are deciduous. (Tainton, NM 1999)

**Scale**: A measure of the extent to which a management activity or event affects an environmental value or a management unit, in time or space. An activity with a small or low spatial scale affects only a small proportion of the forest each year, an activity with a small or low temporal scale occurs only at long intervals (Source: FSC-STD-01-001 V5-0).

**Scale, intensity and risk**: See individual definitions of the terms ‘scale’, ‘intensity’, and ‘risk’.
**Significant:** For the purposes of Principle 9, HCVs 1, 2 and 6 there are three main forms of recognizing significance.

- A designation, classification or recognized conservation status, assigned by an international agency such as IUCN or BirdLife International;
- A designation by national or regional authorities, or by a responsible national conservation organization, on the basis of its concentration of biodiversity;
- A voluntary recognition by the manager, owner or Organization, on the basis of available information, or of the known or suspected presence of a significant biodiversity concentration, even when not officially designated by other agencies.

Any one of these forms will justify designation as HCVs 1, 2 and 6. Many regions of the world have received recognition for their biodiversity importance, measured in many different ways. Existing maps and classifications of priority areas for biodiversity conservation play an essential role in identifying the potential presence of HCVs 1, 2 and 6 (Source: FSC-STD-01-001 V5-0).

**Silviculture:** The art and science of controlling the establishment, growth, composition, health and quality of forests and woodlands to meet the targeted diverse needs and values of landowners and society on a sustainable basis (Source: Nieuwenhuis, M. 2000. Terminology of Forest Management. IUFRO World Series Vol. 9. IUFRO 4.04.07 SilvaPlan and SilvaVoc).

**Stakeholder:** See definitions for ‘affected stakeholder’ and ‘interested stakeholder’.

**Statutory law or statute law:** The body of law contained in Acts of Parliament (national legislature) (Source: Oxford Dictionary of Law).

**Tenure:** Socially defined agreements held by individuals or groups, recognized by legal statutes or customary practice, regarding the ‘bundle of rights and duties’ of ownership, holding, access and/or usage of a particular land unit or the associated resources there within (such as individual trees, plant species, water, minerals, etc.) (Source: World Conservation Union (IUCN). Glossary definitions provided on IUCN website).

**Thicket/Thickets:** Within the forest* or Savanna*, an area where there is increase in woody plant densities (definition from MWAF (SEA 2015)).

**Threat:** An indication or warning of impending or likely damage or negative impacts (Source: Based on Oxford English Dictionary).

**Threatened species:** Species that meet the IUCN (2001) criteria for Vulnerable (VU), Endangered (EN) or Critically Endangered (CR), and are facing a high, very high or extremely high risk of extinction in the wild. These categories may be re-interpreted for FSC purposes according to official national classifications (which have legal significance) and to local conditions and population densities (which should affect decisions about appropriate conservation measures) (Source: Based on IUCN. (2001). IUCN Red List Categories and Criteria: Version 3.1. IUCN Species Survival Commission. IUCN. Gland, Switzerland and Cambridge, UK.).

**Timber harvesting level:** The actual harvest quantity executed on the **Management Unit**, tracked by either volume (e.g. cubic meters or board feet) or area (e.g. hectares or acres) metrics for the purpose of comparison with calculated (maximum) allowable harvest levels.

**Timely manner:** As promptly as circumstances reasonably allow; not intentionally postponed by The Organization*; in compliance with applicable laws, contracts, licenses or invoices.

**Traditional Knowledge:** Information, know-how, skills and practices that are developed, sustained and passed on from generation to generation within a community, often forming part of its cultural or spiritual identity (Source: based on the definition by the World Intellectual Property Organization (WIPO). Glossary definition as provided under Policy / Traditional Knowledge on the WIPO website).

**Traditional peoples:** Traditional peoples are social groups or peoples who do not self-identify as indigenous and who affirm rights to their lands, forests and other resources based on long established custom or traditional occupation and use (Source: Forest Peoples Programme (Marcus Colchester, 7 October 2009)).
Uphold: To acknowledge, respect, sustain and support (Source: FSC-STD-01-001 V5-0).

Use rights: Rights for the use of resources of the Management Unit that can be defined by local custom, mutual agreements, or prescribed by other entities holding access rights. These rights may restrict the use of particular resources to specific levels of consumption or particular harvesting techniques (Source: FSC-STD-01-001 V5-0).

Vegetation Unit: A complex of plant communities ecologically and historically (both in spatial and temporal terms) occupying habitat complexes at the landscape Scale. (Mucina and Rutherford, 2006)

Verifiable targets: Specific goals, such as desired future forest conditions, established to measure progress towards the achievement of each of the management objectives*. These goals are expressed as clear outcomes, such that their attainment can be verified and it is possible to determine whether they have been accomplished or not.

Very Limited portion: The area affected shall not exceed 0.5% of the area of the Management Unit in any one year, nor affect a total of more than 5% of the area of the Management Unit (Source: based on FSC-STD-01-002 V1-0 FSC Glossary of Terms (2009)).

Waste materials: unusable or unwanted substances or by-products, such as:

- Hazardous waste, including chemical waste and batteries;
- Containers;
- Motor and other fuels and oils;
- Rubbish including metals, plastics and paper; and
- Abandoned buildings, machinery and equipment.

Water bodies (including water courses): Seasonal, temporary, and permanent brooks, creeks, streams, rivers, ponds, and lakes. Water bodies include riparian or wetland systems, lakes, swamps, bogs and springs.

Water scarcity: A water supply that limits food production, human health, and economic development. Severe scarcity is taken to be equivalent to 1,000 cubic meters per year per person or greater than 40% use relative to supply (Source: Millennium Ecosystem Assessment. 2005. Ecosystems and Human Well-Being: Policy Responses. Findings of the Responses Working Group. Washington DC: Island Press, Pages 599-605).

Water stress: Occurs when the demand for water exceeds the available amount during a certain period or when poor quality restricts its use. Water stress causes deterioration of freshwater resources in terms of quantity (aquifer over-exploitation, dry rivers, etc.) and quality (eutrophication, organic matter pollution, saline intrusion, etc.) (Source: UNEP, 2003, cited in Gold Standard Foundation. 2014. Water Benefits Standard).

Wetlands: Transitional areas between terrestrial and aquatic systems in which the water table is usually at or near the surface or the land is covered by shallow water (Source: Cowarding, L.M., Carter, V., Golet, F.C., Laroe, E.T. 1979. Classification of Wetlands and Deepwater Habitats of the United States. DC US Department: Washington).

Under the Ramsar Convention, wetlands can include tidal mudflats, natural ponds, marshes, potholes, wet meadows, bogs, peatlands, freshwater swamps, mangroves, lakes, rivers and even some coral reefs (Source: IUCN, No Date, IUCN Definitions – English).

Workers: All employed persons including public employees as well as ‘self-employed’ persons. This includes part-time and seasonal employees, of all ranks and categories, including laborers, administrators, supervisors, executives, contractor employees as well as self-employed contractors and sub-contractors (Source: ILO Convention C155 Occupational Safety and Health Convention, 1981).
